

DRYMTO

Bringing a fundraising idea to life through identity and interface.

A crypto-based fundraising platform: people with a dream ask for support, and anyone can back them in cryptocurrency. The name joins “dream” and “crypto”; the symbol is a phoenix.

CONTEXT

Startup · Iran & Dubai

ROLE

Brand identity, logo, original illustration, website UI, wireframes, user flows

DESIGN

Setayesh Ganji

02 — BEFORE YOU BEGIN

What this file shows

The file is in two parts. **Brand** covers the phoenix symbol, the idea behind it, the gold-and-blue palette and the type. **Product** follows the website: the journeys mapped before any screen was drawn, the step from wireframe to UI, then each key screen — home, sign-up, donating, and creating a fundraiser from choosing a beneficiary to submitting for review.

It ends with what the next iteration would change.

CONTENTS

		BOARD
BRAND		
Symbol	How the phoenix is built on one circle	03
Concept	Dream + crypto, and the logo's versions	04
Colour	Gold, cobalt, charcoal and the illustration tones	05
Typography	Lato and how it works in the interface	06
PRODUCT		
User flows	Three people, three journeys: A, B, C	07
Process	From Persian wireframes to the UI	08
Screens	Home, access, donating, the fundraiser wizard, payout	09–14
Next iteration	What would change from here	15

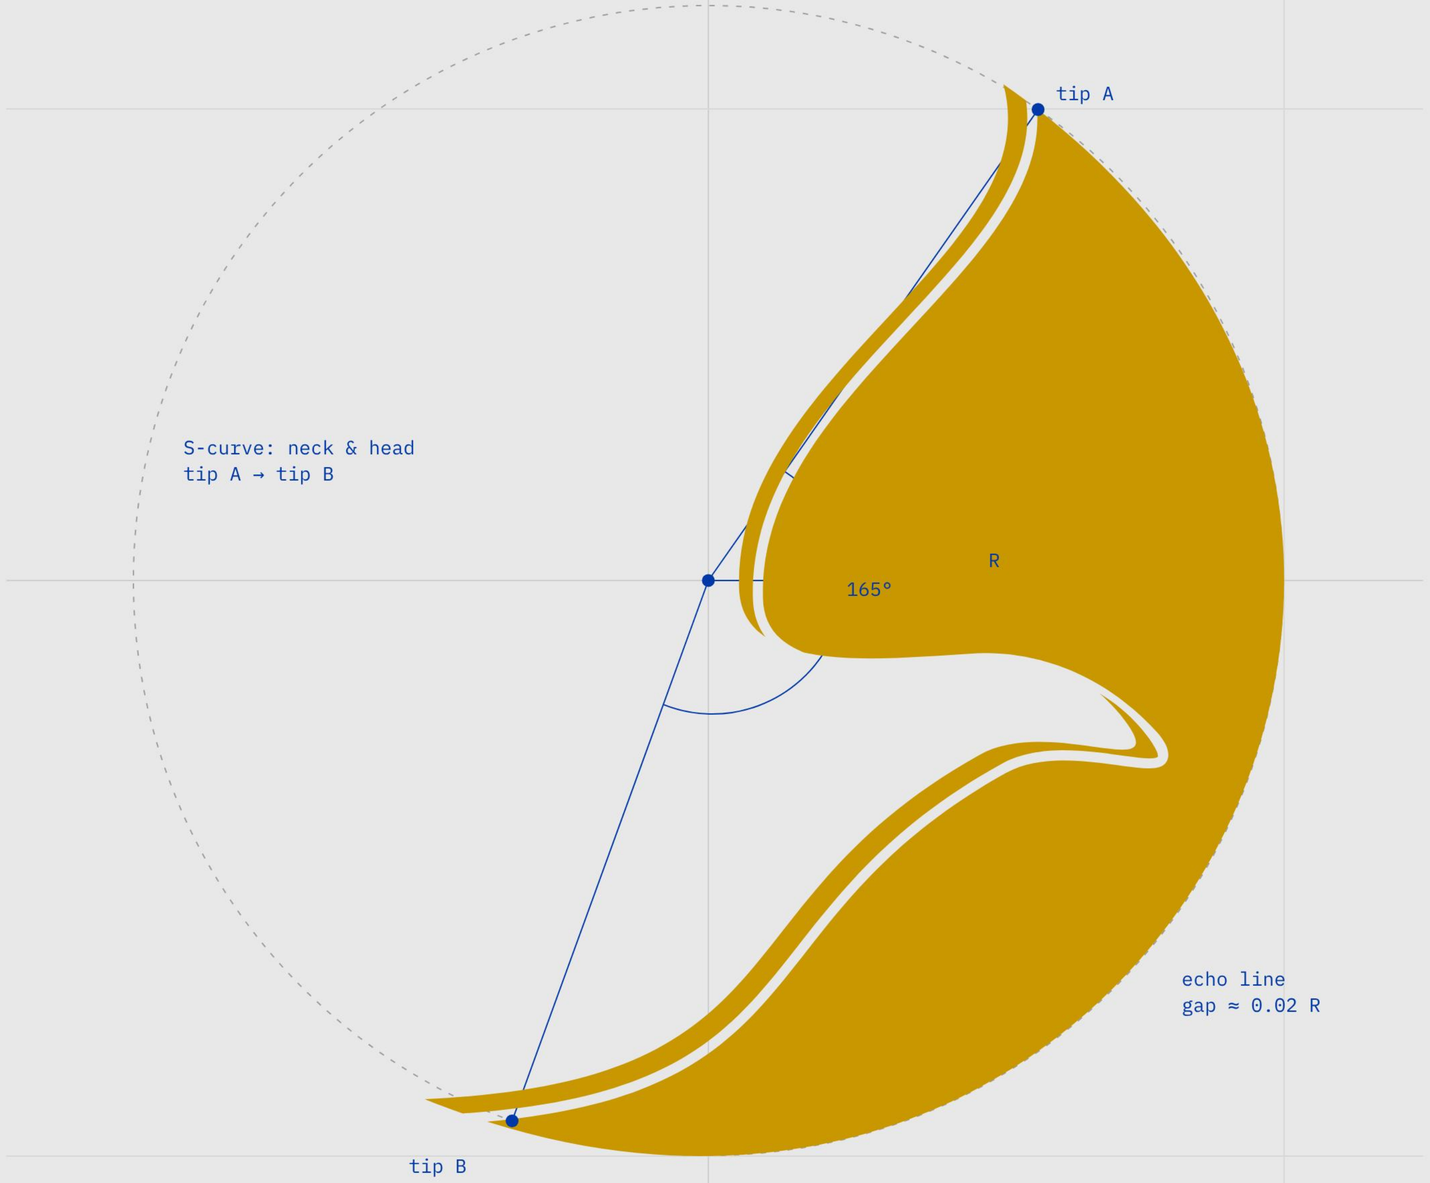

HOW TO READ

Three conventions run through the boards.

------ Blue construction lines show the geometry under the symbol.

1 Numbered markers on a screen match the notes beside it. A, B and C name the three user journeys.

MOCKUP Screens are design-stage mockups and contain placeholder content from the original project.

03 — SYMBOL

Logo construction

A phoenix drawn from one circle. 165° of the circle's edge becomes the body; a single S-curve, running tip to tip, carves the neck and the raised head; a thin tapered echo follows the cut like a trailing feather.

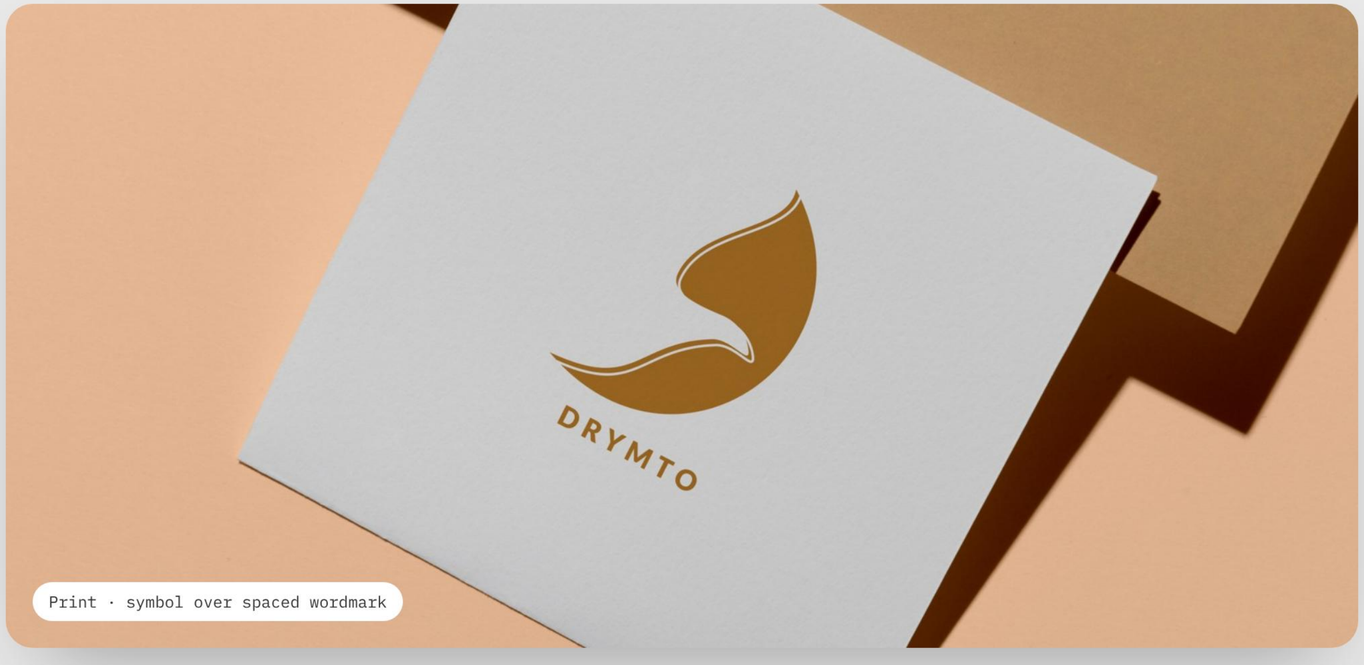

BASE FORM	Circle, radius R
EDGE KEPT	165° of arc
CUT	One S-curve, tip to tip
ECHO	2 tapered lines · gap ≈ 0.02 R
OVERALL	1.49 R × 1.86 R

04 — CONCEPT

A phoenix for every dream

Drymto is a cryptocurrency-based fundraising platform — a startup spanning Iran and Dubai — connecting people seeking support for their ideas with contributors who give in crypto. The name joins “dream” and “crypto”; the mark draws on the phoenix, a symbol of dreaming and aspiration. Gold and blue tie it to an illustrated world of people, growth and possibility.

- Dream + crypto → Drymto
- Phoenix → aspiration
- Gold & blue → possibility

WHO ARE YOU?

Lorem ipsum dolor sit amet. Ut iste natus ea voluptatem quia qui iste excepturi et enim voluptas ut dolorum molesti nesciunt rerum ea magnam autem ut quia earum. Sed aliquid quia ut quam nostrum aut eius corporis. Et sint rerum u

Section heading in gold · body Regular

Yekan Bakh

Persian + Latin

One bilingual family carries both versions of the product: the Persian wireframes and the English interface. Every text layer in the final file uses it.

194	20	26	176
Heavy	Bold	Medium	Regular

Style runs per weight, counted in FINAL.xd

HIERARCHY

Heavy for every title, Regular for reading, nothing in between that competes. Inputs and buttons share one pill shape, so type and form feel cut from the same round tool as the symbol.

DRYMTO

Interface lockup · tracked wide in print

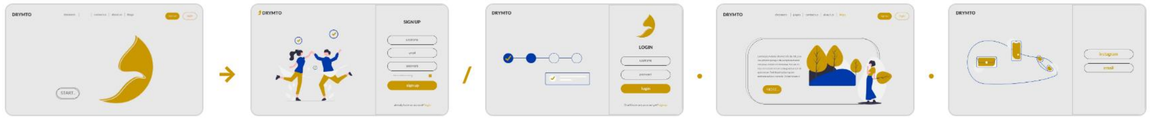

07 — USER FLOWS · 28 SCREENS

Three people, one dream

Mapped from the project's own website roadmap: someone creates a fundraiser, a supporter contributes in crypto, and the beneficiary sets up a payout — each journey one question per screen.

ENTRY

Everyone

FLOW A

Dreamer

create a fundraiser

FLOW B

Supporter

fund a dream

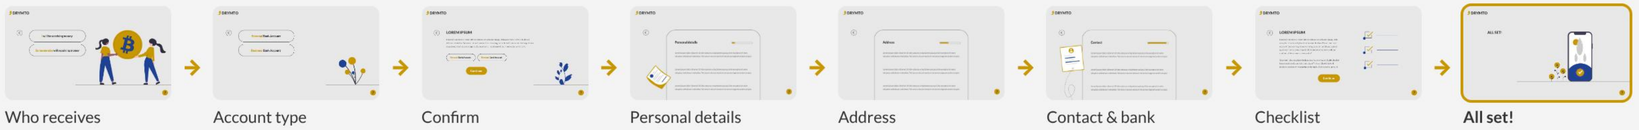

In the roadmap, Donate links straight into the payout steps below. Decide whose journey that is — the supporter's, or the dreamer's once the goal is reached.

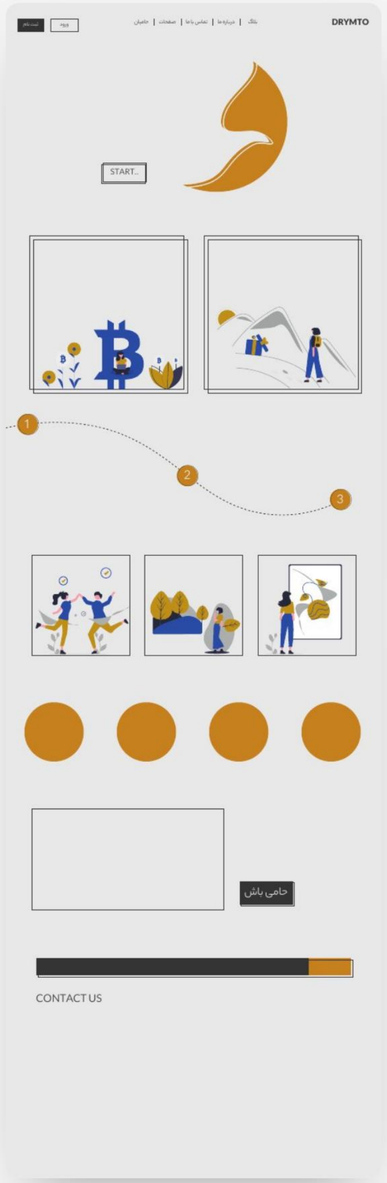

FLOW C

Receiver

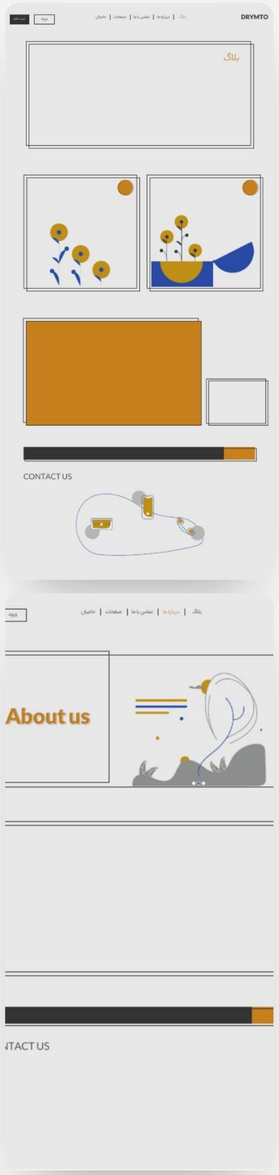

set up payout

WIREFRAME · PERSIAN · RTL

WIREFRAME · INNER PAGES

FINAL UI · ENGLISH · LTR

08 — PROCESS

From a Persian wireframe to the UI

The structure was settled in Persian first, right to left, then carried into an English interface. What survived the move is what the brand stands on.

KEPT

Symbol as the hero, the “START..” entry, the numbered 1-2-3 path

CHANGED

Square boxes became rounded cards that echo the symbol's curve

CHANGED

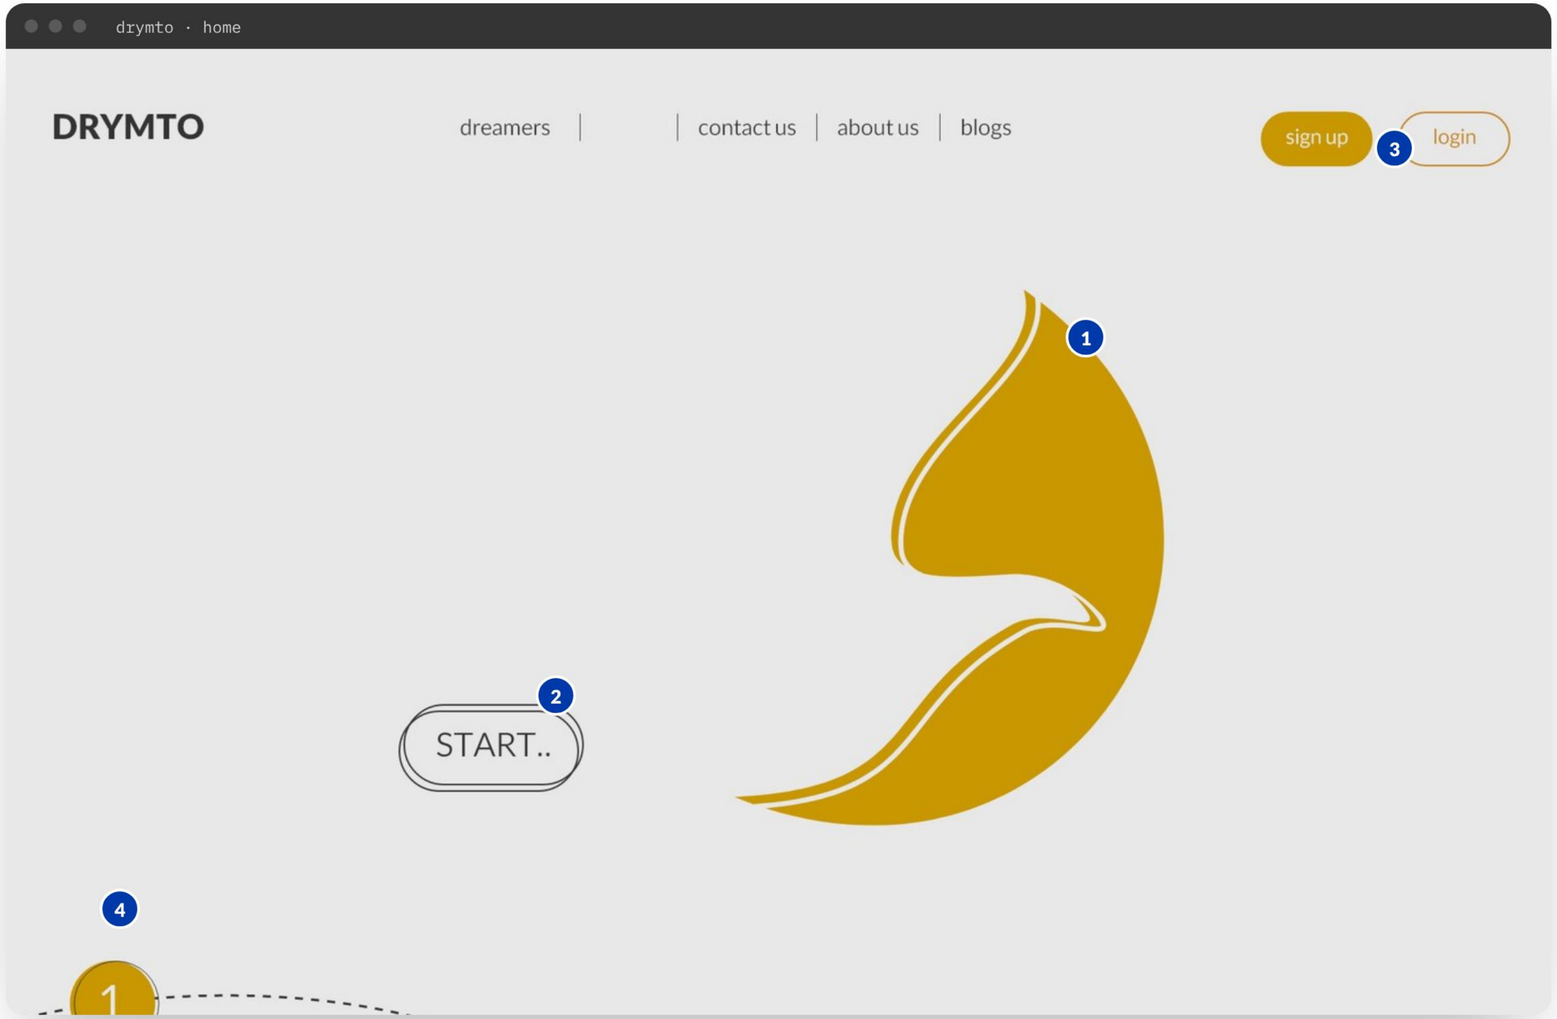

Amber #C6811E warmed to gold #C99700 on screen

CHANGED

Navigation mirrored from right-to-left to left-to-right

MENTOR NOTE

This bilingual process is a strength — say so in the case study. If Persian users are still the audience, show one key screen in both directions.

09 — HOME

A long scroll told as a story

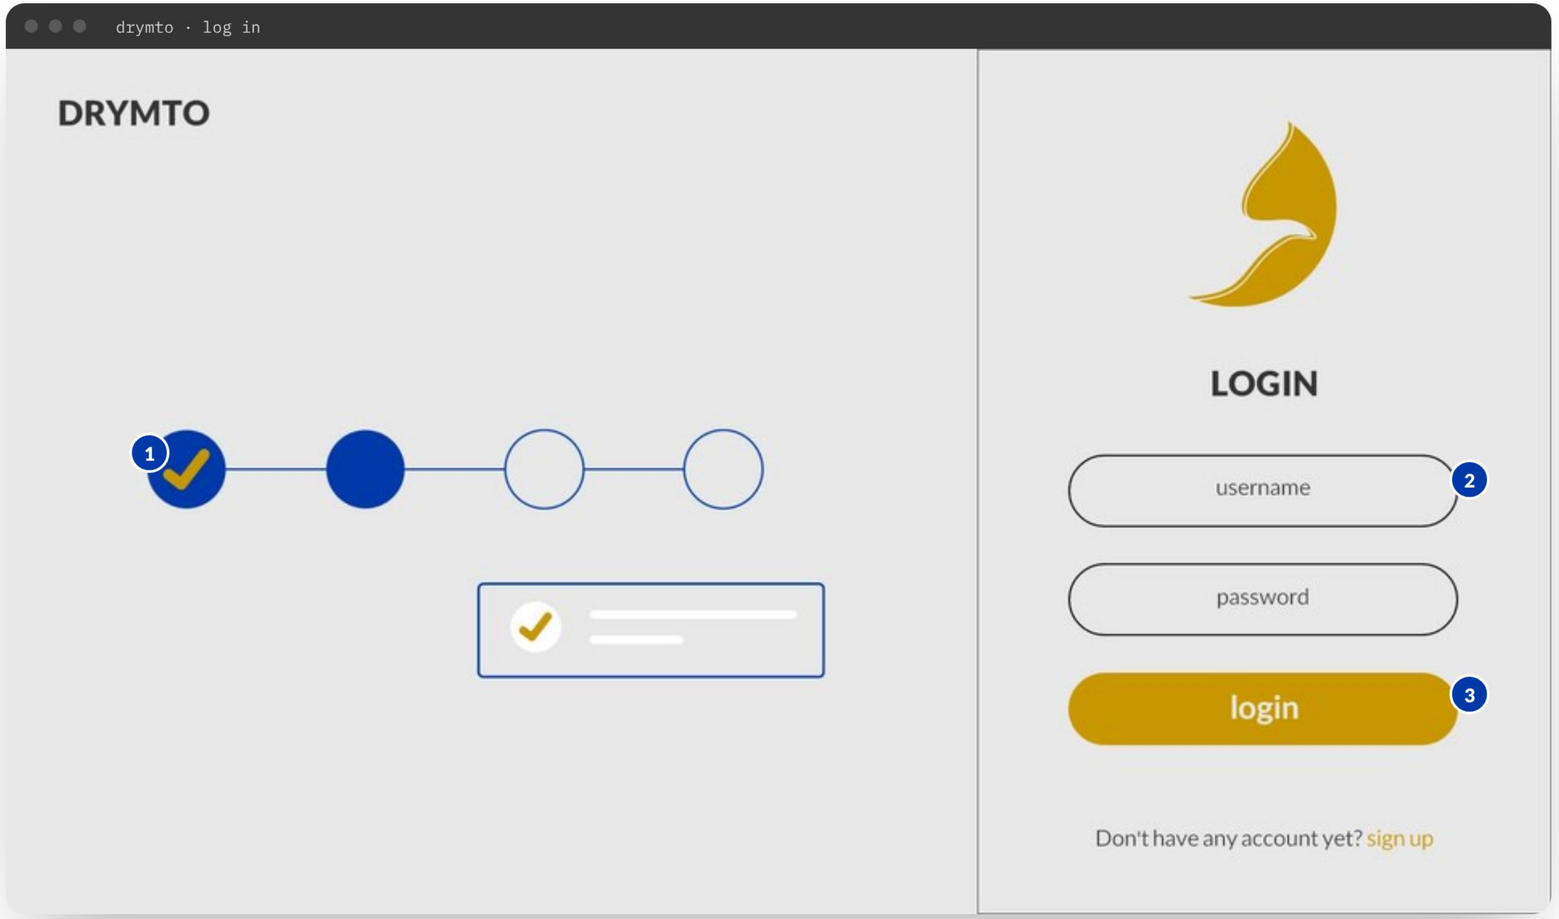

1. The symbol is the hero, at full size — the brand speaks before the product does.
2. “START..” is an outlined button with an ellipsis: the key action has the least weight on the page.
3. Sign up and Log in sit top right as two small pills.
4. A dotted 1-2-3 path explains the platform — its text is still placeholder.

Below the fold: Bitcoin, a story card, the mountain climb with a “dream” button, contact.

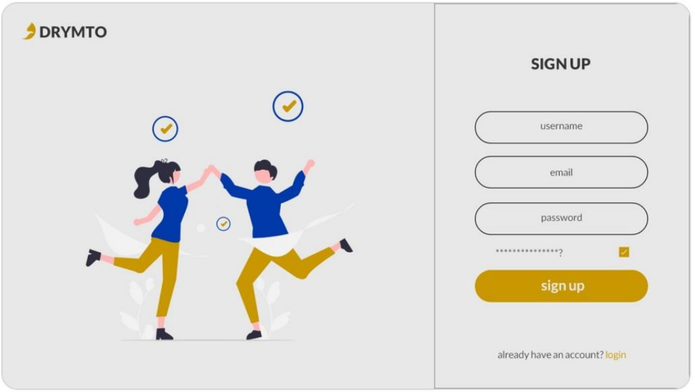

NEXT ITERATION

Write the real three steps, and make one solid primary action — “Start your dream” — in gold with charcoal text.

10 — LOG IN & SIGN UP

Split screens, soft pills

4 · Sign up — the same split, a celebration on the left

1. A four-dot step indicator beside a log-in form — it is unclear what the steps are.
2. Fields are labelled only by placeholder text, which vanishes as you type.
3. White text on gold buttons reads at 2.7:1.
4. Sign-up has a checkbox beside the password with no visible label.

WHAT WORKS Half illustration, half form: the brand stays present even on a utility screen, and each form links to the other.

NEXT ITERATION

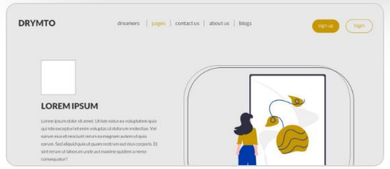

Labels above the pills, a show-password toggle, charcoal text on gold — and drop the stepper unless log-in really has steps.

11 — DREAMERS & DONATE · FLOW B

Funding a stranger's dream

1. An empty photo frame — the dream has no face yet.
2. The goal is stated in Bitcoin: “GOAL: 5BTC”.
3. The amount starts at 0.00001 with no unit beside it.
4. One gold Donate pill — the only filled button on the screen.
5. “Goal vision” bar shows progress, but no numbers: raised, left, supporters.

Dreamers · listing

A dream

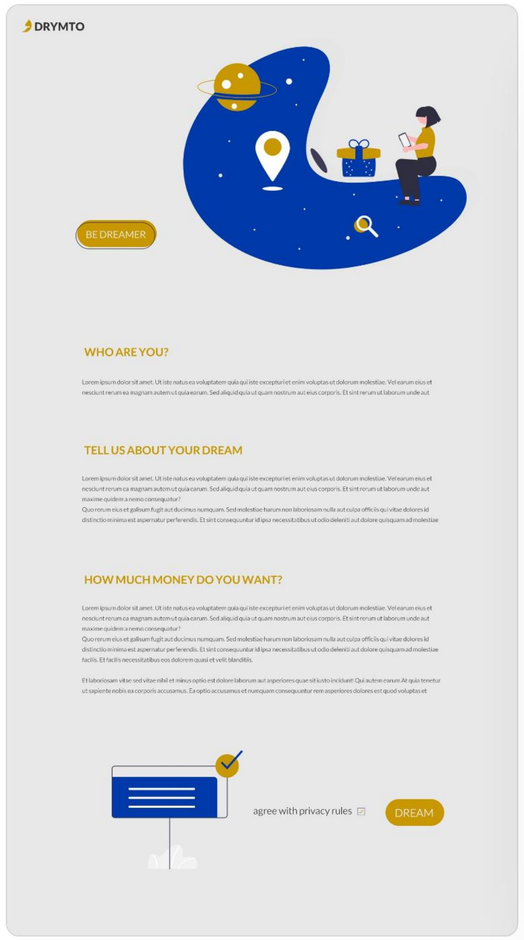

WHAT WORKS

The essential trio sits on one line of sight: the goal, the amount, the progress. Every dream card ends in the same Donate pill.

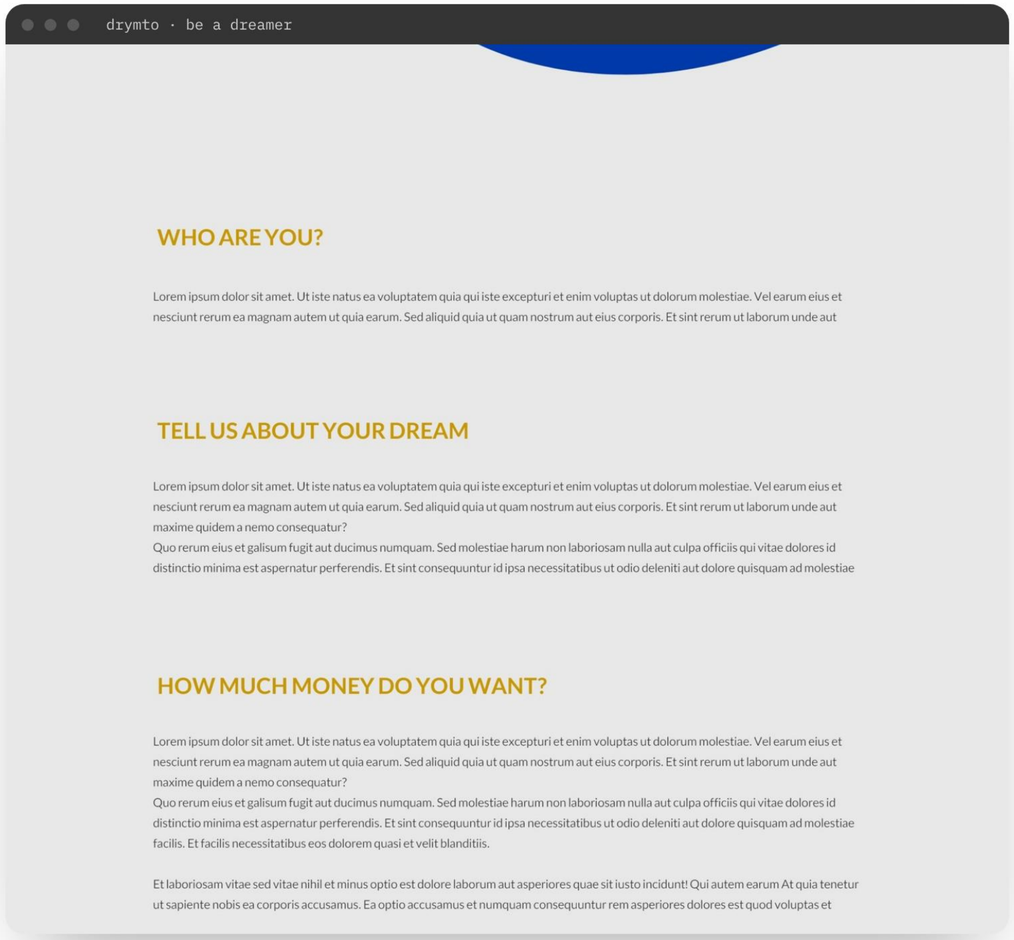

NEXT ITERATION

Giving to a stranger needs trust: a verified-dreamer badge, raised / goal in numbers, three preset amounts, and one currency across the whole product.

WHOLE PAGE

THE THREE QUESTIONS · DETAIL

WHAT WORKS Plain, human questions instead of form jargon: “Who are you?”, “Tell us about your dream”, “How much money do you want?”

12 — BE A DREAMER · FLOW A START

The invitation to dream out loud

A cobalt night-sky hero with a “BE DREAMER” button, three questions in gold headings, a privacy checkbox and a single “DREAM” button to send it all.

THE OVERLAP

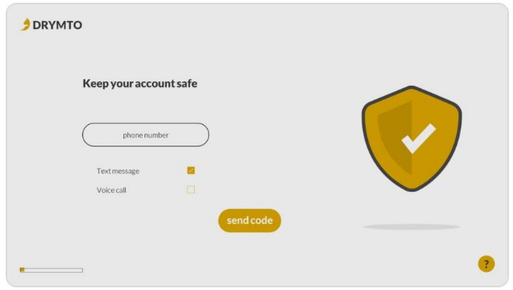

The wizard that follows asks the same things again, one per screen: Who? · How much? · Title & story. A dreamer answers each question twice.

LEGIBILITY

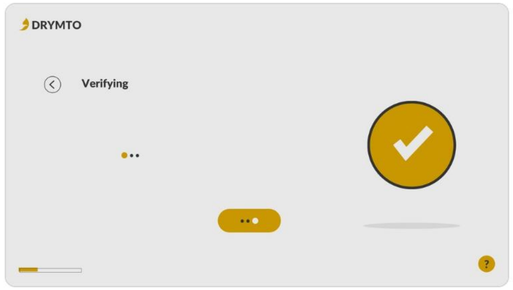

Gold headings on mist grey measure 2.2:1 — below the 3:1 minimum even for large text.

NEXT ITERATION

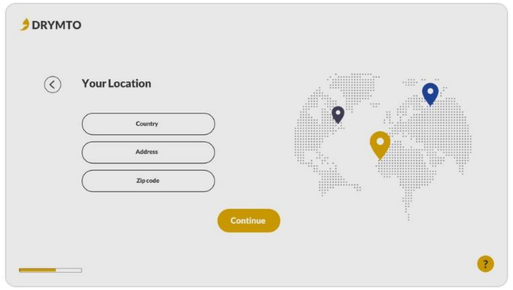

Make this page the inspiration — real dreams, how it works — and let the wizard do all the asking.

1 · Keep your account safe

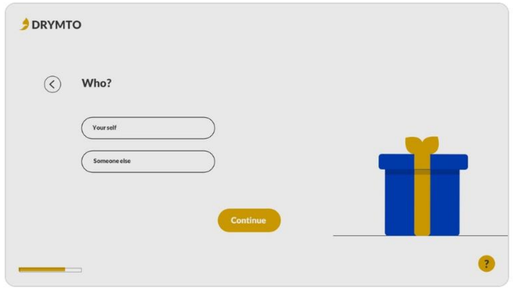

2 · Verifying

3 · Your location

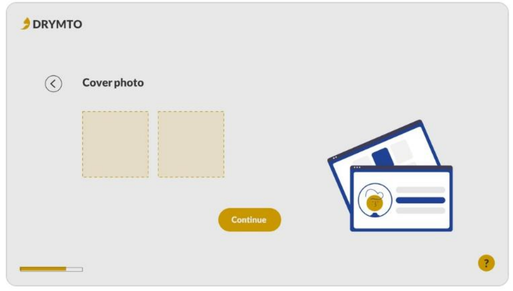

4 · Why? — tag chips

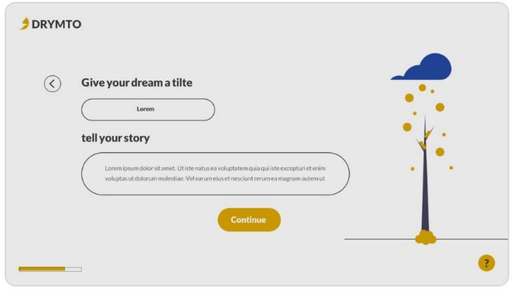

5 · Who? — choose the beneficiary

6 · How much? — set the target (ETH)

7 · Cover photo

8 · Give your dream a title, tell your story

9 · Your dream under review

13 — DREAM WIZARD · FLOW A

Creating a fundraiser, one question a screen

- A fixed frame on every step: back arrow top left, a “?” help button bottom right, progress bottom left.
- Each step has its own illustration, so filling a form feels like walking a path.
- Security comes first — phone verification before the dream is written.
- It ends honestly: “Your dream under review”, not an instant publish.

THREE CURRENCIES

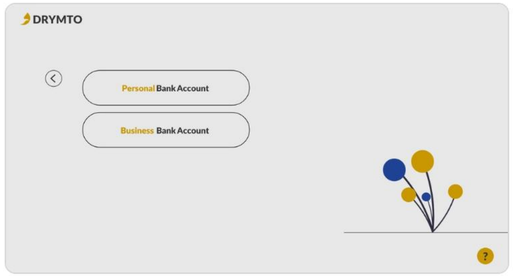

The dreamer asks in ETH (step 6), supporters give against a BTC goal, and the payout goes to a bank account. Pick one unit and show conversions.

NEXT ITERATION

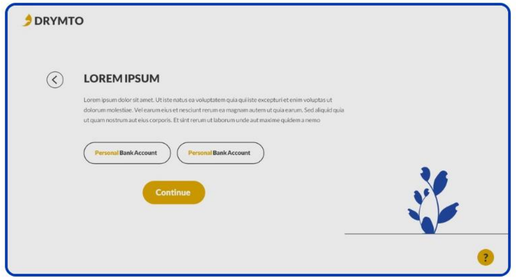

Label the progress (“Step 6 of 9”), let a dreamer save and come back, and show a preview of the dream card before review.

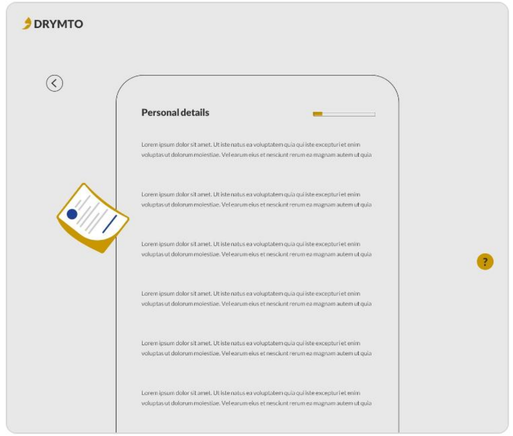

1 · Who receives the money?

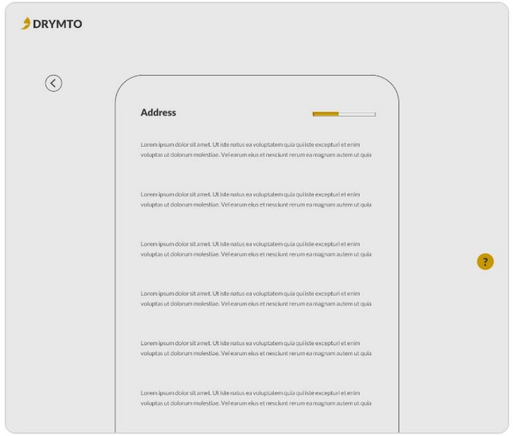

2 · Personal or business account

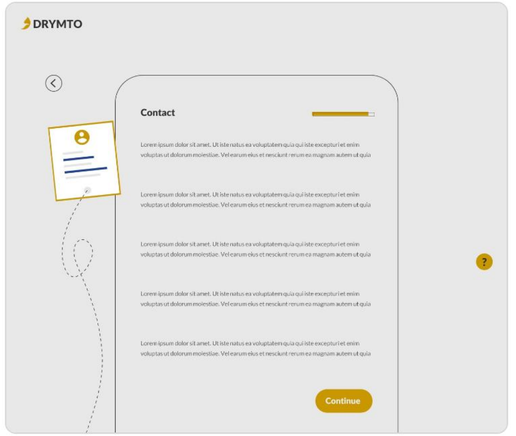

3 · Confirm — both chips read “Personal”

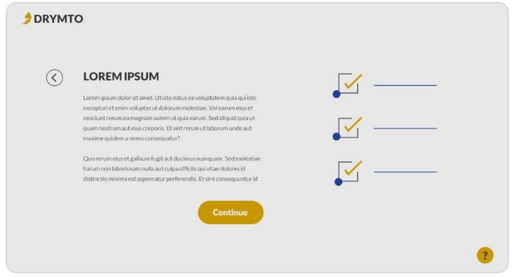

4 · Personal details

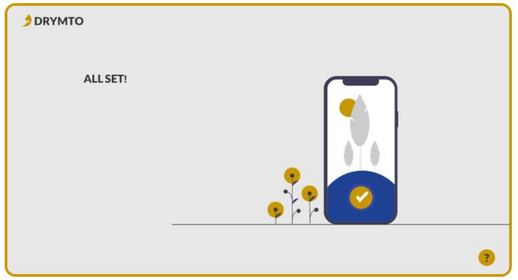

5 · Address

6 · Contact & bank account

7 · Checklist recap

8 · All set!

WHAT WORKS

Long forms live inside one rounded card with its own progress meter, and a checklist recaps everything before “All set!”.

14 — PAYOUT SETUP · FLOW C

Getting the money to the dream

Eight steps from “who receives the money?” to “All set!”. The first question allows a dream for someone else — a parent, a friend, a cause.

COPY CHECK

Step 3 offers two chips that both say “Personal Bank Account” — the second should read “Business”.

THE MISSING STEP

Supporters give crypto; the dreamer receives into a bank account. Show where the conversion happens, and what it costs.

NEXT ITERATION

Ask for payout details only once a dream is approved, and replace placeholder fields with real labels — name, IBAN, address.

15 — NEXT ITERATION

From concept to product

Design-stage mockups with the original project's placeholder content. The next pass is content, trust and one consistent money model. Each item points to its board.

01 · BRAND

Lock the system

- ○ One logo colour and one orientation — print uses amber and a tilt, the UI uses gold upright · 02 · 06
- ○ Deep Gold #7A5C00 for any gold text · 03
- ○ One-colour, reversed and favicon versions in the master file · 02
- ○ Document the original illustration set as part of the system: figures, plants, gold and blue use · 07 – 12

02 · CONTENT & TRUST

Make it believable

- ○ Replace the original placeholder copy on the key screens, so the product's voice shows · 07 · 09 · 10
- ○ One currency end to end, with conversions shown · 09 · 11 · 12
- ○ Verified-dreamer badge, raised / goal / supporters in numbers · 09
- ○ One sample dream written in full, photo included · 09

03 · USABILITY

Remove the friction

- ○ Charcoal text on gold buttons; labels above every field · 03 · 08
- ○ Ask each question once — long form or wizard, not both · 10 · 11
- ○ “Step 6 of 9”, save and resume · 11
- ○ Separate the supporter's donate flow from the receiver's payout · 05 · 12
