A GAME DESIGN PROJECT

PERSO

A treasure hunt through eighteenth-century Rome

Aurelia searches the streets of the Regola district for her brother Saverio — a treasure hunter who has stolen from the royal treasury.

Third-person adventure · PC · Unreal Engine

THE STORY

Find the one who is lost

Saverio, a treasure hunter, has stolen a treasure from the royal treasury and vanished. His sister Aurelia knows only one thing: he is in Rome.

To find him she must complete a series of tasks and collect clues, one by one, across a corner of the city as it was in the 18th century. In the final task the two meet — and escape together with the treasure.

Saverio

Her brother, the treasure hunter

RESEARCH

Reading the old city

The game is set in the rione Regola, once part of the Campus Martius. Giambattista Nolli's 1748 map of Rome fixed the streets; 18th-century engravings and site photographs fixed the buildings.

Nolli map of Rome, 1748 · detail

Santa Maria in Monticelli · 18th-century engraving

The bell tower today

PRIMARY BUILDING

Santa Maria in Monticelli

01 · Archive photograph

02 · Site survey

03 · 3D model, church and convent

First recorded in 1101, consecrated by Pope Paschal II, restored in 1860 and 1900 — the church is the game's main landmark, rebuilt from archive images and photographs taken on site.

Every façade, every side

The church block is modelled on all four sides; the convent buildings around it are built as separate pieces, ready to be arranged along the streets of the Nolli map.

Southeast · Northwest · Northeast · Southwest

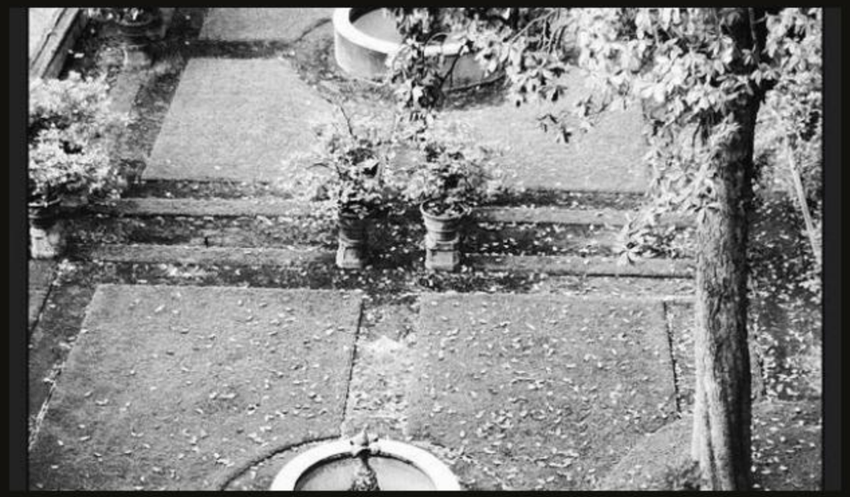

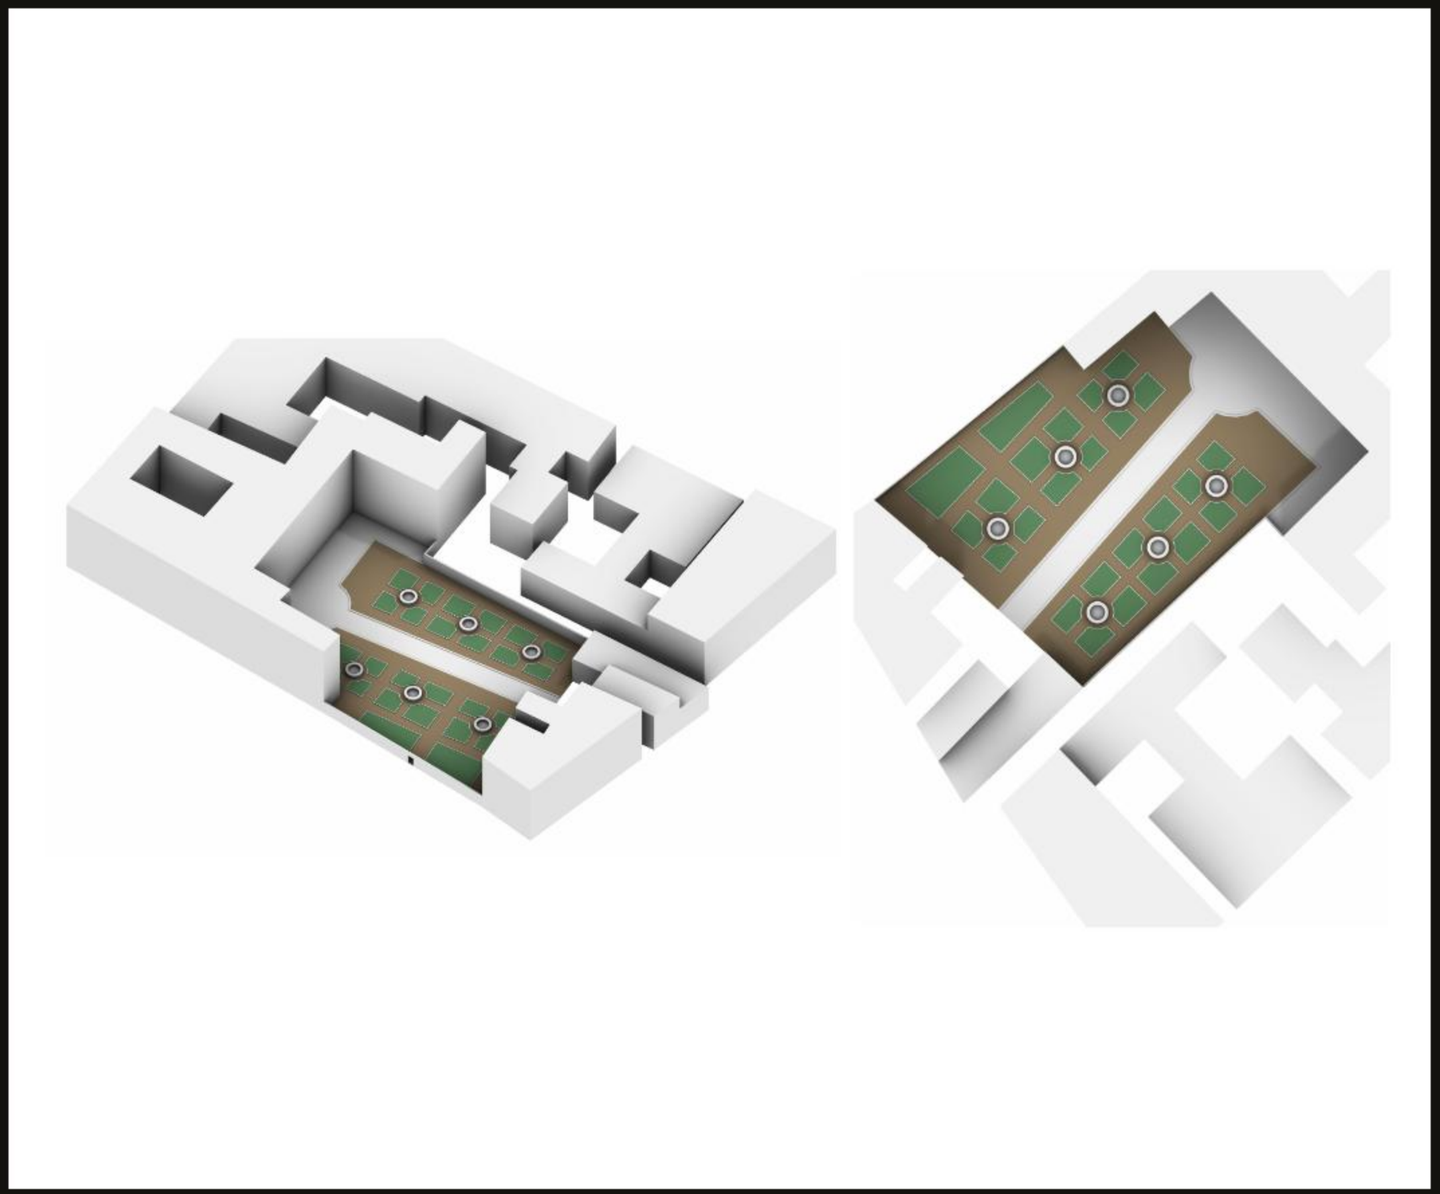

TERTIARY ELEMENT

The garden of Palazzo Spada

The enclosed garden inside Palazzo Spada becomes a quiet space between the streets. It was massed in white first, then given its paths, beds and fountains.

The garden today

CHARACTERS

Three figures

Aurelia

The heroine — hooded, cloaked, built to move fast through the streets.

Saverio

Her brother — a treasure hunter in dark armour.

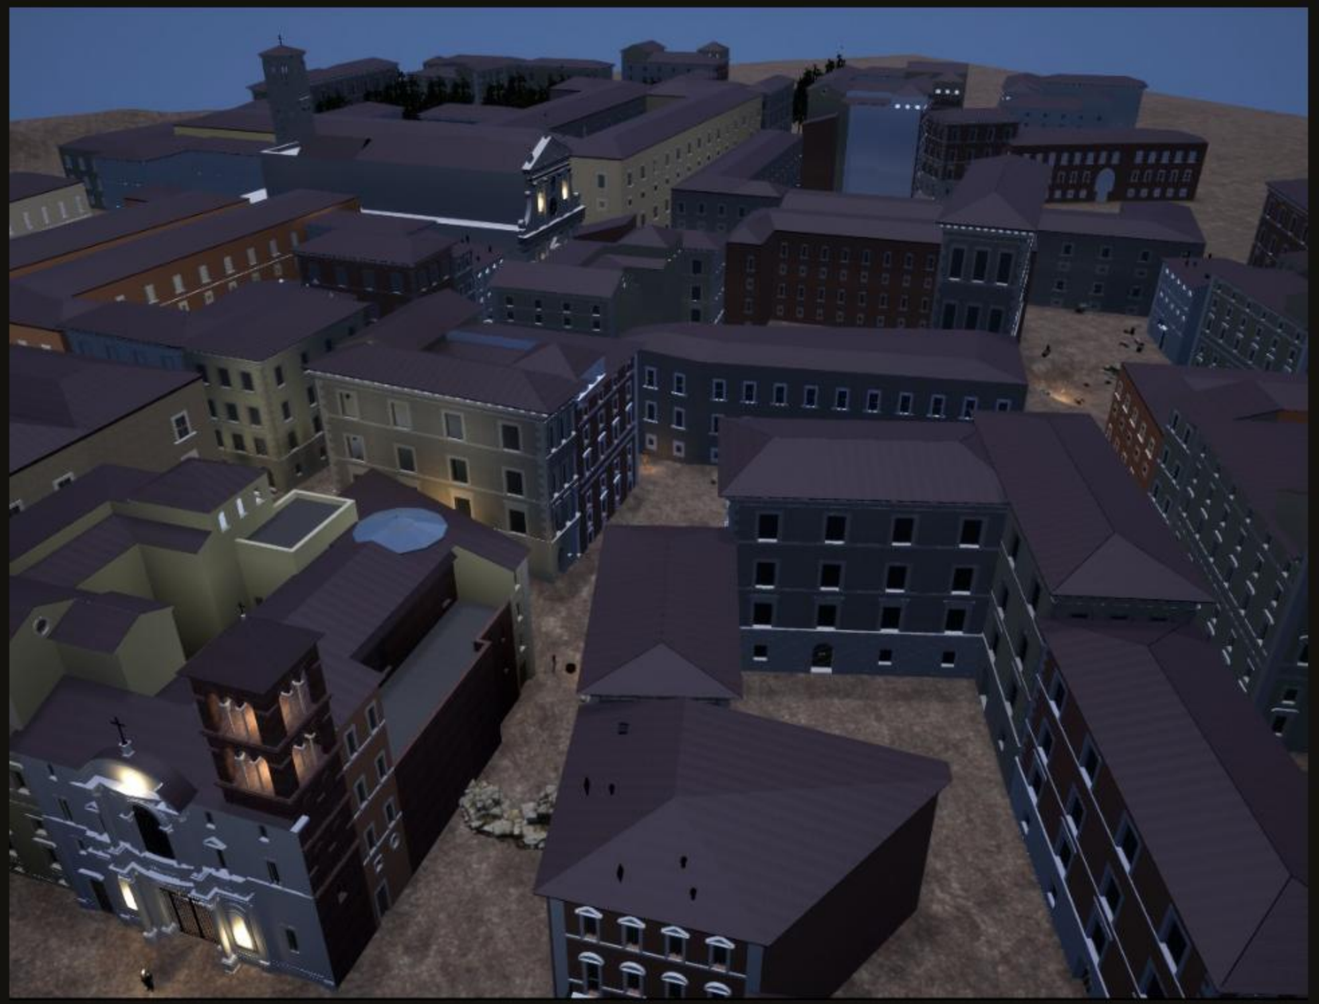

The guard

Watches over the treasure and the city's gates.

IN THE ENGINE

Rome at night

The district assembled in Unreal Engine: blue dusk, lit windows, a storm over the bell tower — and Aurelia crossing the square.

HOW IT PLAYS

Clue by clue

A third-person PC game. Collectibles are scattered through the streets; each one is harder to find than the last as Aurelia gets closer to her brother.
