PREPRODUCTION PHASES

CONCEPT DEVELOPMENT

CREATIVE BRIEF

A creative Brief states the needs of a projects. These needs include emotional, intellectual, narrative, and technical specification.

RESEARCH

open-ended question-driven approach focused on solving issues by observing, collecting info and looking for design opportunities.

KEYWORDS/MIND MAPS

A visual representation of thoughts and ideas that creates associations between keywords. Keywords are words conjuring images, emotions, and stories.

INITIAL CONCEPT

a general idea formed by combining findings and characteristics. An (abstract) construct that begins to define what a project is becoming.

SCRIPT OUTLINE

A general list of sequential scenes, plot points and story arcts moments in the order that they will be written within a screenplay.

IMAGE-MAKING

STORYBOARD

A sequence of frames laid out in an order that visualizes the script. From a narrative standpoint, it illstrates the key moments of a story: how it starts, what happens, how it ends.

MOODBOARD

A collection of images and visuals objects created for figuring out how to create unified styles or themes for a design project.

DESIGNBOARD

A sequence of frames that tell a narrative or a story. The frames' aesthetic is firmly established, the narrative is clearly illustrated, and scenes' transition is suggested.

PITCH BOOK

It documents the development of the creative process and showcases all the crucial steps, researches, thinking and aesthetic choices.

DCVM

Multimedia design

A MATTER OF STYLE.
VISUAL AND STYLISTIC GUIDES

Style includes choices of visual elements such as:

- Color palette,
- Material or medium (e.g. animation or live-action),
- Lines’ and skins’ quality,
- Scale,
- Abstract or concrete treatments,
- Texture,
- Typography,
- Cinematic conventions.

DCVM

Multimedia design

STORYBOARDING: DEFINITION

«Hand-Drawn Storyboards combine image-making with storytelling. Storyboards contain a sequence of frames laid out in an order that visualizes a script or written treatment. From a narrative standpoint, a storyboard illustrates the key moments of a project. Important events in a story, such as how it starts, what happens, how it ends, should be included»

(Austin Shaw, 2016)

Gone with the wind - 1939
Storyboard by William Cameron Menzies

CAMERA FIELDS & SHOOTING ANGLES

* “Camera Field” indicates the space framed by the camera, the size of the shot.

* “Shooting angle” is the angle from which the camera captures the scene, and from which the framing is determined.

DCVM

Multimedia design

FIELDS, ANGLES AND MOVEMENTS

TYPE OF SHOT:

- Extreme Wide Shot
- Wide Shot
- Medium Shot
- Close-Medium shot
- Close-Up shot
- Extreme Close-Up shot
- Detail

SHOOTING ANGLES:

- Low angle shot
- High Angle Shot
- Dutch Angle shot
- Over the shoulder shot
- Two shot
- Bird’s eye view

CAMERA MOVEMENTS:

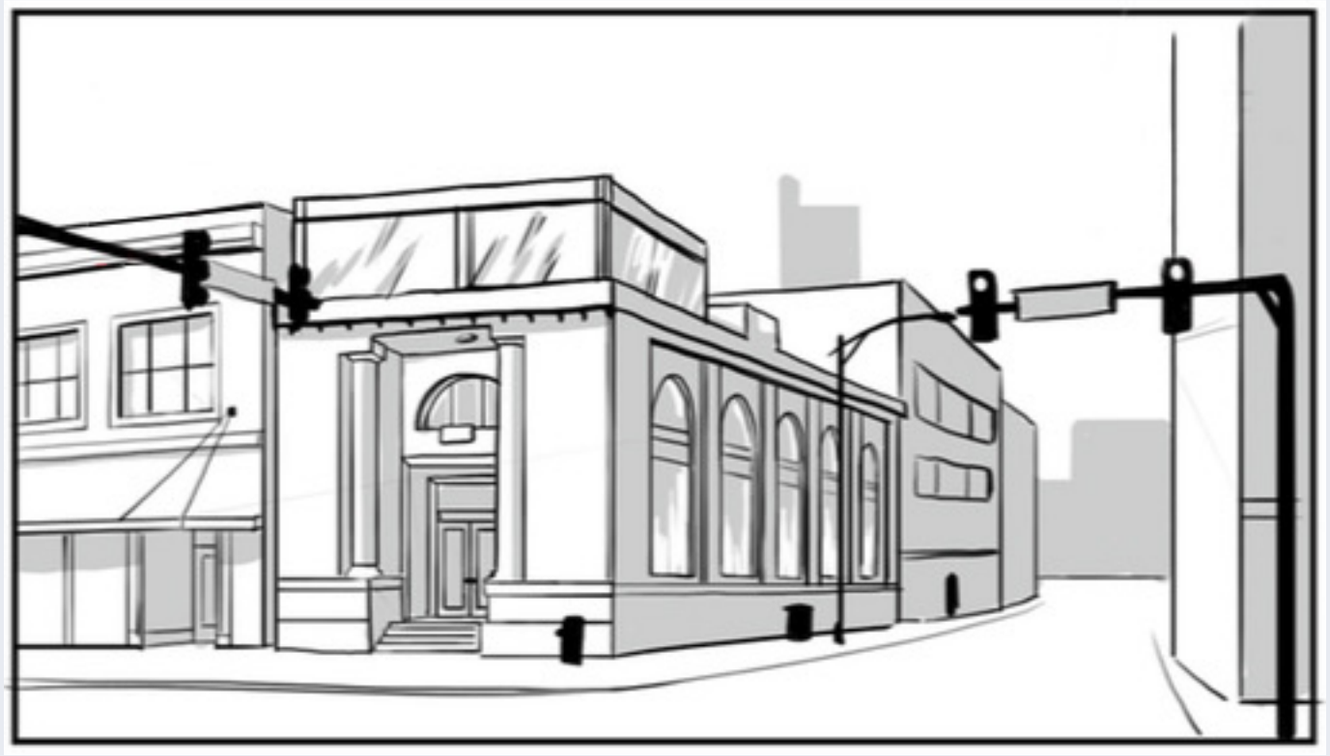

- Dolly Shot
- Pan
- Tilt

DCVM

Multimedia design

TYPE OF SHOT:

EXTREME WIDE SHOT

The view is so far from the subject that he/ she isn't the focus anymore, but rather the surrounding area is. It is also used as an establishing shot within a film, as it shows the audience where the action is taking place.

DCVM

Multimedia design

TYPE OF SHOT:

WIDE SHOT

The wide shot is often used as an establishing shot in a film, as it normally sets the scene and the character's place within it. This type of shot shows the full length of the subject while also including a large amount of the surrounding area of the film setting.

DCVM

Multimedia design

TYPE OF SHOT:

MEDIUM SHOT

A medium shot is captured at a medium distance from the subject. It allows the viewer to have a solid view of each character within a film and to see both the details of the subject in addition to the surrounding setting the scene is taking place in.

DCVM

Multimedia design

TYPE OF SHOT:

CLOSE-MEDIUM SHOT

The close-medium Shot shows part of the subject in more detail. For a person, it typically frames them from about waist up. A variation of a close medium shot is the Cowboy shot this gets its name from Western films from the 1930s and 1940s, which frames the subject from mid-thighs up.

DCVM

Multimedia design

TYPE OF SHOT:

CLOSE-UP SHOT

A close-up shot is a shot taken of a person or object at a close range, in order to capture the minute details of the subject. This shot is tightly framed and takes up most of the screen, as it is used to frame a faces in order to see what type of emotion is being conveyed.

DCVM

Multimedia design

TYPE OF SHOT:

EXTREME CLOSE-UP SHOT

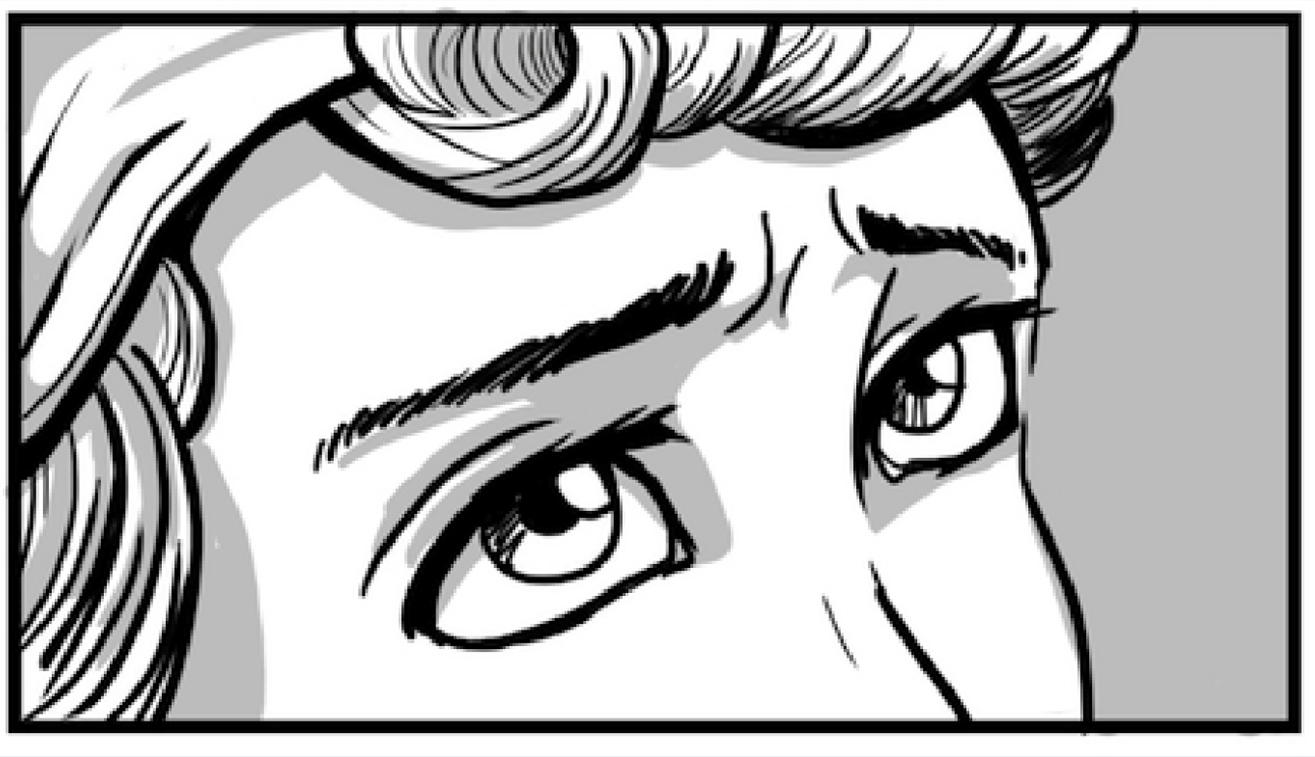

The frame is filled by a subject's face in a large scale, causing their face to be cropped within the frame. This type of shot is often referred to a choker as well, which is when a shot is framed just above the eyes and right below the mouth.

DCVM

Multimedia design

TYPE OF SHOT:

DETAIL

Emphasizes a small area or detail of the subject, such as the eye(s) or mouth.

DCVM

Multimedia design

SHOOTING ANGLE:

LOW ANGLE SHOT

A low-angle shot is when the camera is positioned low on the vertical axis, below the level of the eyeline, and looks up at an object or subject above. It evokes a psychological effect by making the subject look strong and powerful.

DCVM

Multimedia design

SHOOTING ANGLE:

HIGH ANGLE SHOT

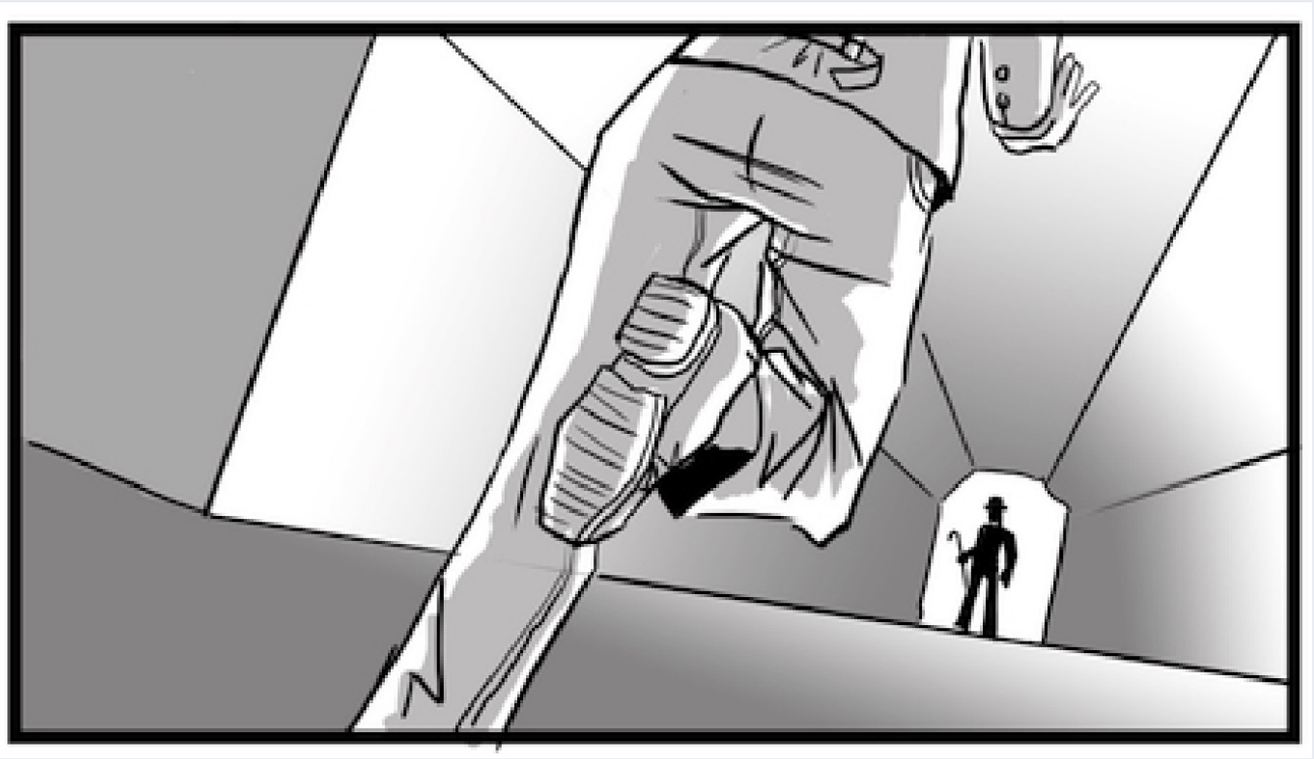

The camera points down on the subject from above. This type of shot is used to make the subject or object below seem vulnerable, powerless, or weak. This camera angle is most commonly used in horror movies to indicate a sense of entitlement the camera has over the subject below.

DCVM

Multimedia design

SHOOTING ANGLE:

DUTCH ANGLE SHOT

In order to execute this, the camera rotates to one side, which results in a frame that is not level. This type of camera angle is used mostly to create a dramatic effect and can heighten psychological distress and tension.

DCVM

Multimedia design

SHOOTING ANGLE:

OVER THE SHOULDER SHOT

It is used when two or more characters are talking to each other in conversation. This type of shot is used to establish eyeline of where each character in the scene is looking, and is most commonly framed through a medium or close-up shot.

DCVM

Multimedia design

SHOOTING ANGLE:

TWO SHOT

A shot in which two subjects appear in the frame. It is most commonly framed through a medium or close-medium shot.

DCVM

Multimedia design

SHOOTING ANGLE:

BIRD'S EYE VIEW

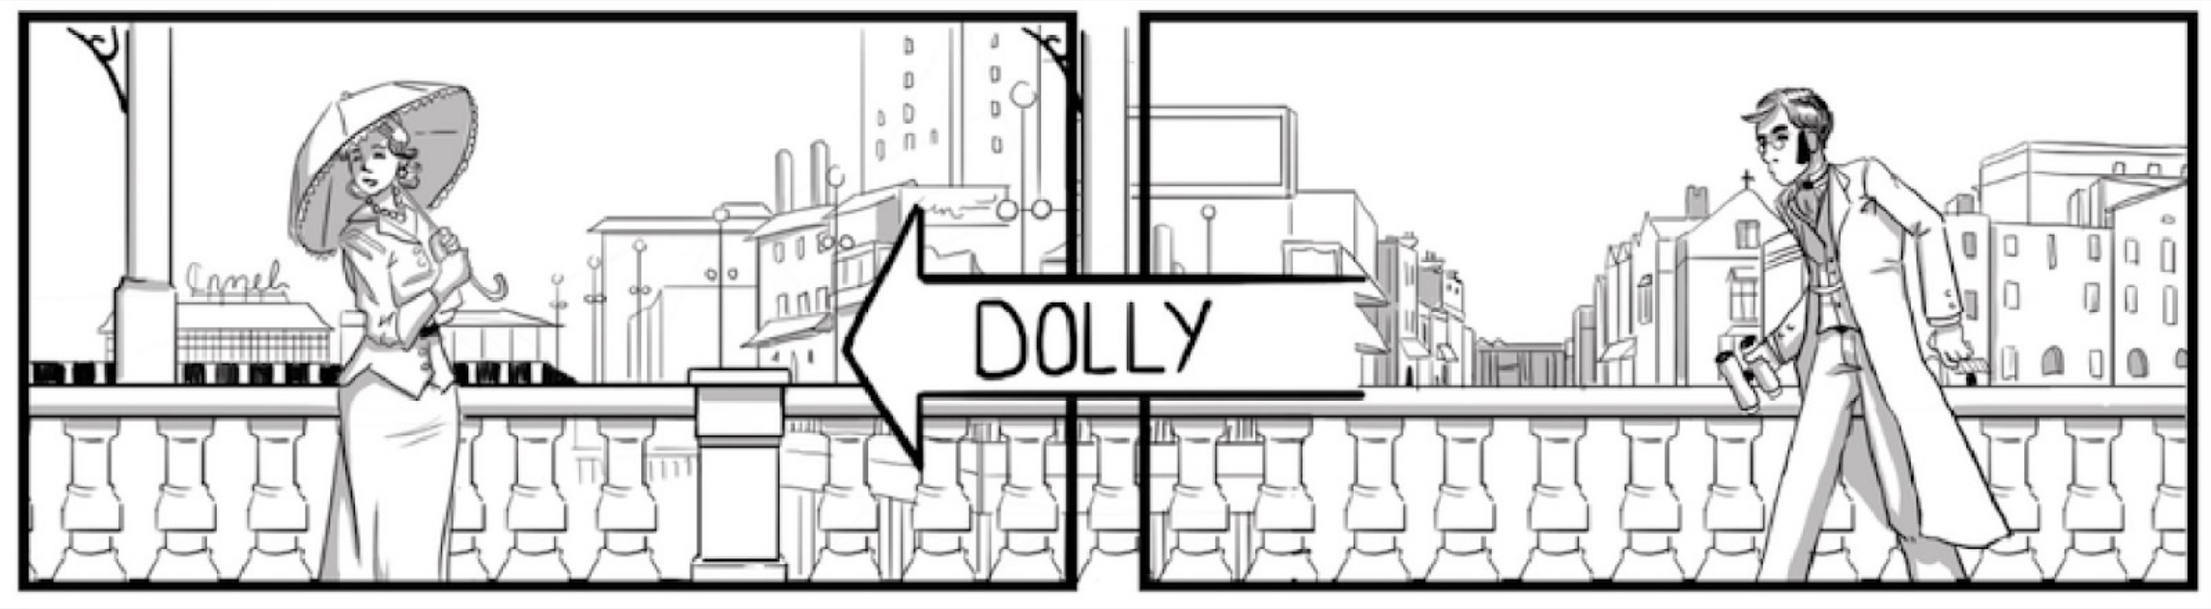

It's an aerial view shot, when the camera is located up above, overhead, capturing the action going on below. Bird's eye shots are used as establishing shots to give context of where the setting of the film is, in addition to being used as transition to show what exactly is going on in a setting from an aerial view.

DCVM

Multimedia design

CAMERA MOVEMENTS:

DOLLY SHOT

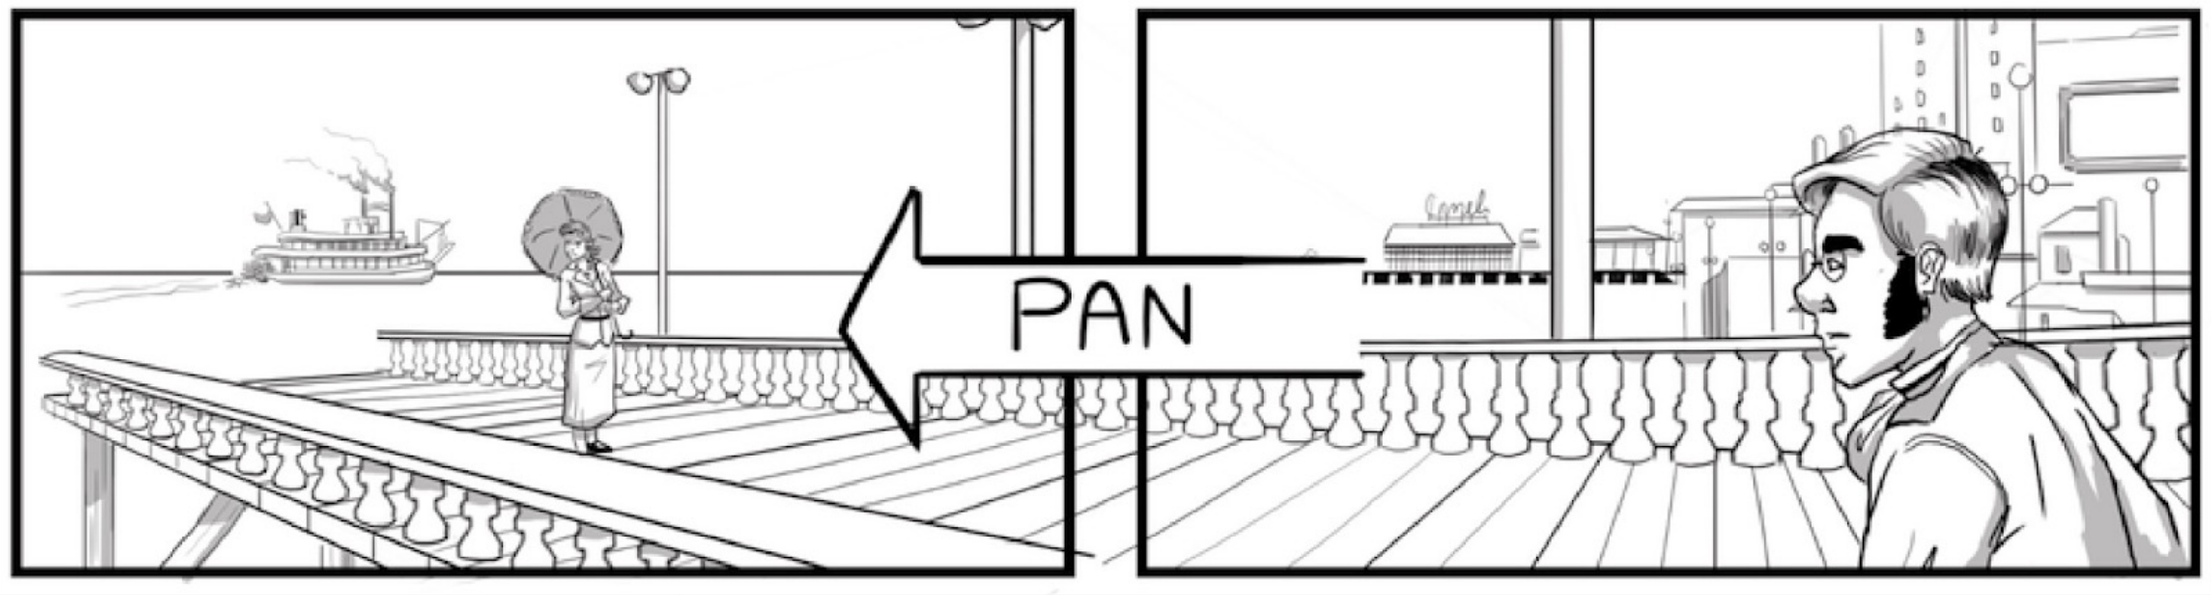

It refers to the camera movement when a camera is mounted on a dolly. In a dolly shot, the camera moves towards, away from, or alongside the subject. The camera dolly is mounted on rail tracks, so the movement is smooth and controlled – and that justifies the name, coming from "doll"

DCVM

Multimedia design

CAMERA MOVEMENTS:

PAN

the camera, placed on a fixed support, rotates on its axis horizontally to the right or left (horizontal panning), vertically from top to bottom and vice versa (v. panning/tilt) and diagonally (oblique panning). During a pan shot, the camera turns from side to side without changing its position.

DCVM

Multimedia design

CAMERA MOVEMENTS:

TILT

the camera, placed on a fixed support, rotates on its axis horizontally to the right or left (horizontal panning), vertically from top to bottom and vice versa (v. panning/tilt) and diagonally (oblique panning). During a pan shot, the camera turns from side to side without changing its position.

DCVM

Multimedia design

DESIGNBOARDING: DEFINITION

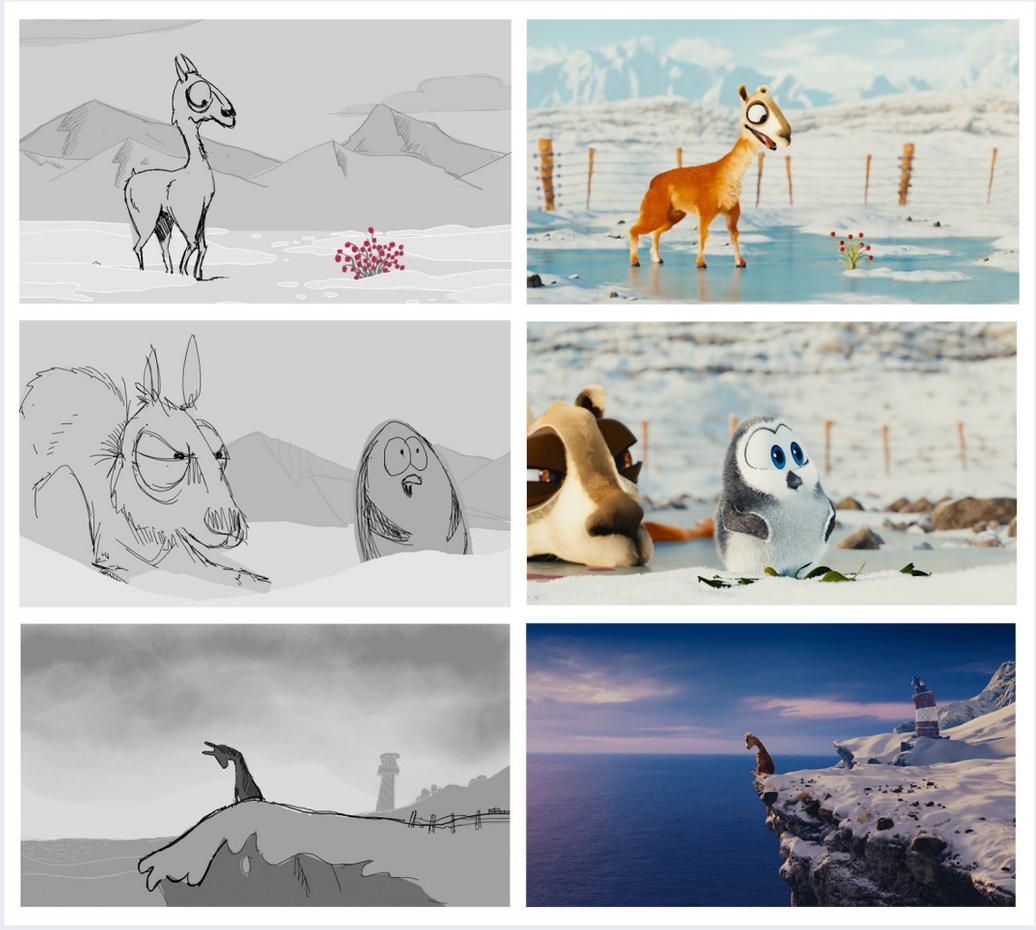

«The design board combines image-making and storytelling. […] It contains a sequence of style frames that tell a narrative or a story. [...] Each frame in a design board is a fully-realized style frame. [...] In design boards the aesthetic is firmly established, the narrative is clearly illustrated, and how scenes transition should at least be suggested if not fully boarded out»

(Austin Shaw, 2016)

DCVM

Multimedia design

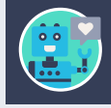

STORYBOARD vs DESIGNBOARD

Storyboards establish *frame composition, *camera placement and angles, *camera movement, *shot's duration, *dialogues/music, *special effects, *transitions between scenes, and notes about *camera and scene directing.

Designboards establish *frame composition, *camera placement and angles, *camera movement, and display the *defined visual style of a motion design project.

DCVM

Multimedia design

HOW TO MAKE PROCESS AND PITCH BOOKS

Both Process and Pitch books serve as containers for creative work and need to be consistent and well-structured.
A designer have to work properly with:

- **Typography**
- **Layout**
- **Colour palette**
- **Quality and tone of communication**
