SAVE THE OCEAN

LIFE BELOW WATER
Group 16

STORYTELLING

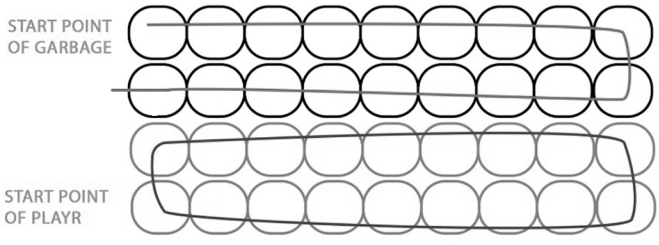

Save the ocean is a cooperative worker placement game which depicts the real life marine ecosystem disaster caused by pollution. The game simulates some of the crucial approaches and policies that we can adopt in reality to cope with such disaster.

It is a heartwarming game of recycling and conservation that will stay with the gamer for a lifetime as they learn the most ,fundamental environmental aspects about reducing , reusing and recyclin.

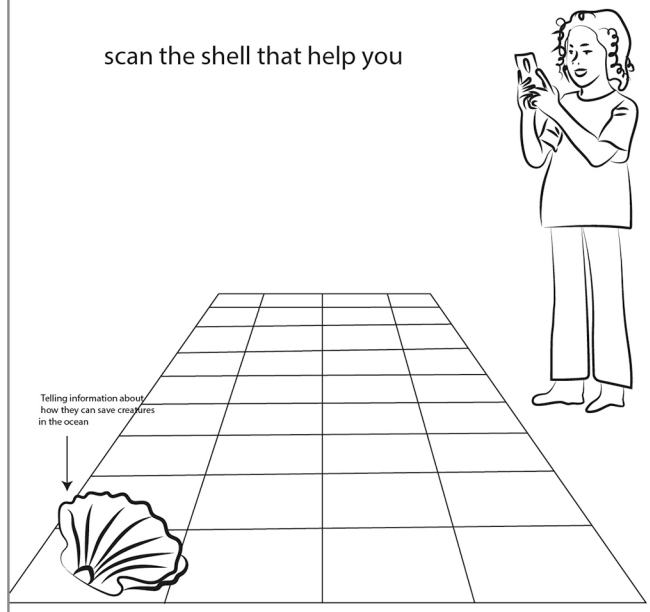

Player takes on the roles of the **Ocean defender** By cleaning up the massive amount of garbage, conducting researches and developing eco-skills, the player's mission is to stop the entrance of huge amounts of garbage to the ocean.

Question
_____?
10 coins
=
one Badge
and water refinery
winner
hooray
Refinery

Lesson 1

GUIDELINES

9

TARGET

LEARNING OBJECTIVES

1. Making first impression with combination of using the Chance and educational aspects.

2. Sharpen the player's focus

3. The player can't blame her|himself because the dice can roll either way.

STORYTELLING

The gamer (our hero actually) will unbox the Box to discover it contents and objects.
He/she will face with a board , dice , 2 Vertebrae and a sphero Robo and also There is a small real shell with QR code in, so when the player scan it with cellphone will hear the voice of Crab in that asks for help to rescue them.

In The beginning, The garbages are moving from the starting point in the sea or ocean to continue their way in the marine area.
We can't stop producing the garbages, so the way to resolve the problem is to start recycling them.
So the First stage of the game will start like this: Our Sphero Robo should: be put in the first Vertebrae Of the board And the indicator of the garbages will be in the first Vertebrae in the left.
For starting the game it's necessary to roll the dice at first to show us that for how many Vertebraes the Robo will move on the 18 blocks of the game board, But before that What is needed to permit the player to start the game is movement of the garbage Vertebrae,forward for one block .

ACTIVITIES

When the player roll the dice , the number will give the player where to go
The robo can move forward for one block , 2 blocks or 3 blocks ! so the dice consists of 3 numbers, 1 , 2 and 3!

DIDACTIC METHODS

When the game begins the player understands what his/her roles are.
The player plays the most important role as the game leader.

Lezione 2

LINEE GUIDA

LEARNING OBJECTIVES

The players will be able to identify their own position on the Board game.

Learning Connecting different ideas, disciplines, perspectives and contexts through involving with the game.

STORYTELLING

The antagonist of the story that is garbage are considered to be alive and their goal is to occupy all the ocean. they will try their best to force the animals to leave the ocean, therefore the player's mission is to save the ocean and prevent the garbages to enter the ocean.

So The number given from the dice, will show where the player will be lead to , In which block
Due to the block the player would be in, he or she encounters with 3 kinds of materials to do the mission as been said above.

1. Clips
2. Questions
3. The stories

ACTIVITIES

If the player leads to the block of **questions**, those simple but challenging and fundamental question should be answered.
Each **correct answer** will give the player one **Coin** and garbages will not move forward at all And each **incorrect answer** will lead the garbages to move forward for 3 blocks.

DIDACTIC METHODS

- Involving with a **practical** level
- A **discursive** level

Lezione 3

LINEE GUIDA

LEARNING OBJECTIVES

1. Having ethical principles in relation to the nonhuman world.
2. Becoming excited about the particular activity and subject, Developing a keen interest.
3. Creating and taking responsibility for the player's own lif.

STORYTELLING

As been said before, What is needed to permit the player to start the game, is movement of the garbage forward for one block (actually to encourage the player to prevent and stop the garbages) So all the garbages are moving forward to the sea , And the player's mission is to stop and **prevent the garbages** from entering the environment of the ocean or on the other hand leads them to be recycled effectively.

ACTIVITIES

The player will roll the dice for the second time and if that block was dedicated to the **video** part, There's is a QR code that leads the player to an educational video link that the player should watch that to be able to continue the game (usually in the YouTube, 7 to 8 minutes) It may be the funniest and most likable part of the game for the player When the player finished watching the video, a coin will be given to the player as the reward , And the garbages would not be moved anymore After doing the {education} task, watching the video.

Or if that block was dedicated to the **story** part, There's is a QR code that leads the player to an educational story link that should be read that to be able to continue the game.

DIDACTIC METHODS

1. Presenting the (problem) situation as clearly as possible and provide **explanations**

2. Applying the **concept** in a new context.

Lezione 4

LINEE GUIDA

LEARNING OBJECTIVES

The protagonist of the story in the gamer who is in the role of ocean saver, will learn a lot through doing some different activities like watching related videos, answering simple but fundamental questions about the specific important issues we (as the game designer) involving with to teach them.

STORYTELLING

When the player finished having 10 coins by doing different activities like for example watching 3 videos, answering 3 questions and reading 4 stories, will be able to get a Badge that will make the player become the leader or someone like a lord commander and gets the permission to construct a **refinery house** to stop the garbages for ever , And then the player will be .the winner of the game.

ACTIVITIES

Getting a batch by having 10 coins through doing different activities watching videos, answering questions and reading stories construct a **refinery house** to stop the garbages for ever.

DIDACTIC METHODS

1. We’re going to design the game’s stage so simple for the player to always be the winner at the end
   In other words the garbage (the ANTAGONIST) will never be able to enter the marine area so this Gives the player the opportunity to immerse themselves in their roles

2. As the leader then the player can Invite people to choose a role
