

01 — SYMBOL

Logo construction

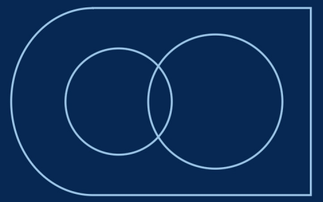

The symbol is one capsule drawn twice. A bar with a half-ellipse end holds two overlapping discs; the second capsule is the first turned 180° around the point where they meet. Two halves of one trade — entry and exit, the trade and its review — locked on a single line.

MODULE	Capsule 1.6 H × H
END CURVE	Half-ellipse 0.44 H × 0.5 H
DISCS	r 0.28 H · R 0.36 H
OVERLAP	0.83 H
SYMMETRY	Point · 180° rotation
OVERALL	2.38 H × 2 H

02 — CONCEPT

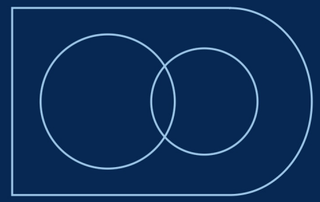

One trade, two halves

The gradient is the memory: solid navy at the rounded end, dissolving into white at the cut end. On a white page the symbol fades toward its centre; on navy it fades outward. The same mark, remembering in two directions.

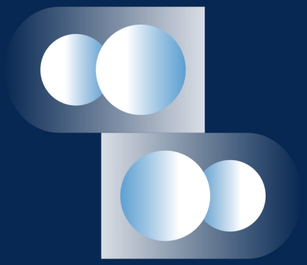

A · the trade

rotate 180°

B · the review

03 — COLOUR

Navy, sky and paper

Three colours lifted straight from the symbol. Navy carries the record, sky marks what is being looked at, white is the page the numbers sit on. Profit and loss stay out of the brand palette.

THE TWO GRADIENTS IN THE SYMBOL

Capsule · Navy → White · 85% opacity

Discs · White held to 35% → Sky 85%

BRAND ↔ PRODUCT GAP

The app runs on a neutral charcoal with a bright cyan accent; the symbol is navy and sky. Shift the dark ground toward Ledger Navy and the accent toward Signal Sky, and the product and the mark become one system.

WORDMARK

Inter runs the whole product, from page titles to table cells, with tabular figures so every number holds its column. A weight shift — Trade in 600, Memory in 400 — gives the name a lockup without a second typeface.

TradeMemory

05 — INFORMATION ARCHITECTURE

From statement to self-knowledge

Twenty-four routes in three layers. Nothing reaches the workspace until a statement has passed reconciliation — trust before insight is built into the route map, not just the copy.

LAYER 1 · ACCESS

Landing

Promise, private-beta label, no-advice line

Register · Log in

Email check, password reset, auth error page

Trading accounts

List · New account: currency, timezones, pip size

LAYER 2 · IMPORT GATE

Import MT5 statement

1. Select statement
2. Validate
3. Review reconciliation · 3 checks
4. Confirm import
5. Reconstruct trades
6. Result

Confirm stays disabled until every check passes.

LAYER 3 · ACCOUNT WORKSPACE · 7-ITEM NAV

Overview

KPIs, review progress, latest import, recent days

Calendar

Month of trading days, realised P&L by close

Trades → Trade detail

Reconstructed trades, executions, journal

Review Queue

One trade at a time until the queue is empty

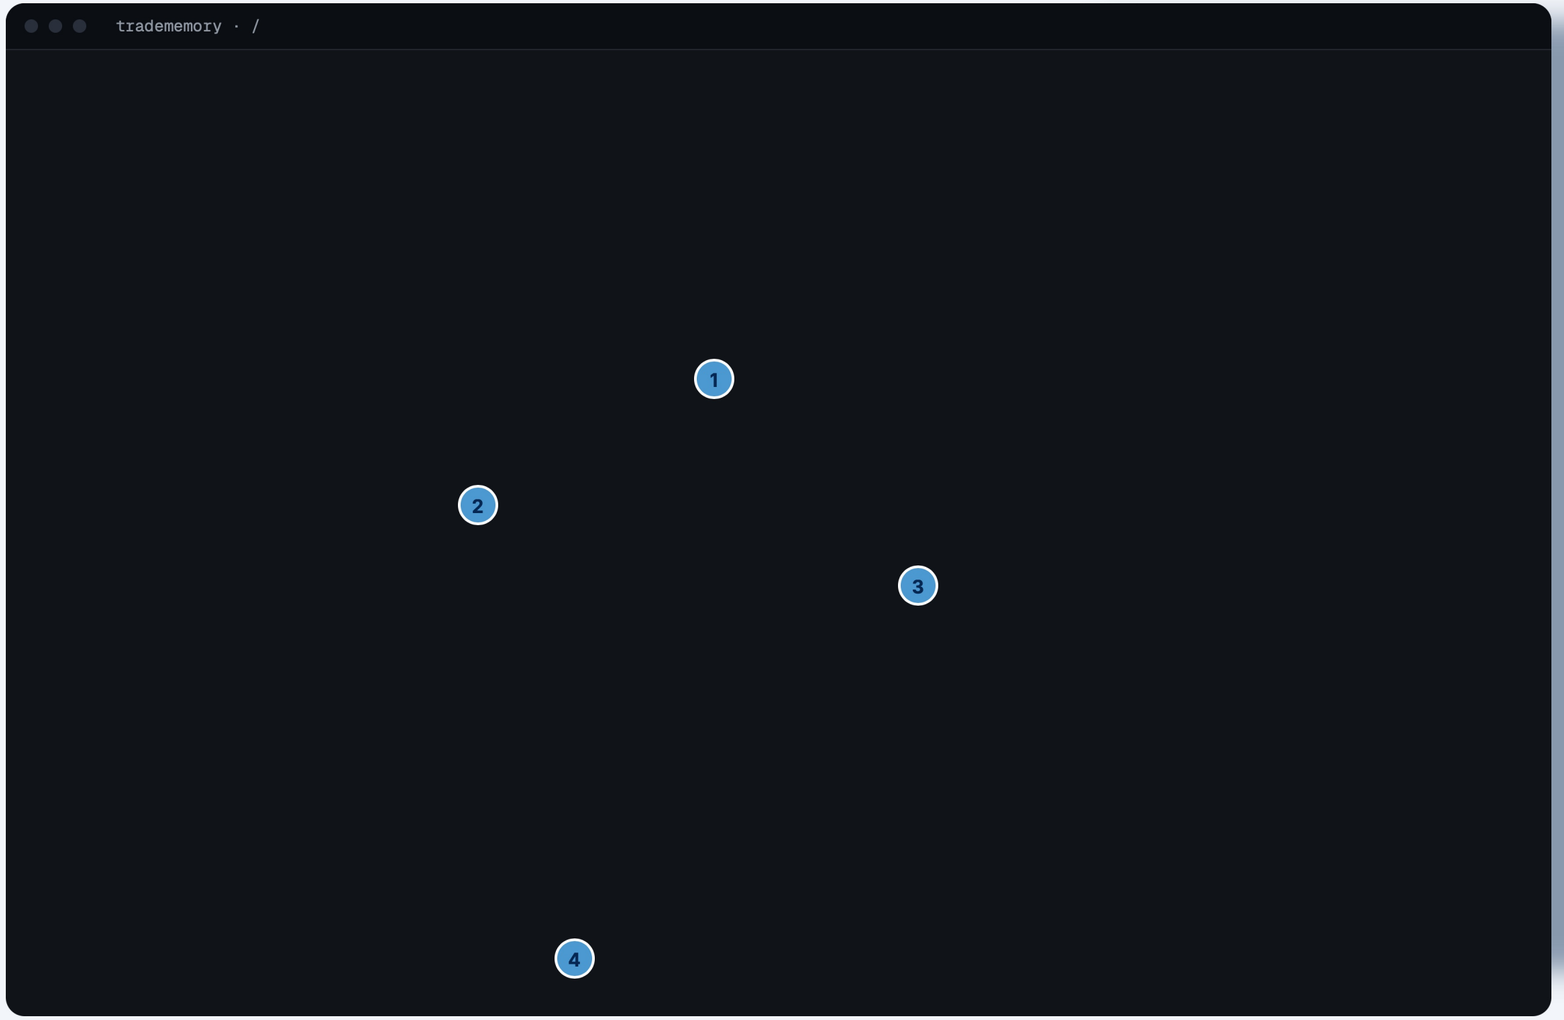

Insights → Statement analysis

Evidence with n and strength labels

Import · Settings

New statements, pip/lot rules, setups, theme

ON EVERY SCREEN | “Historical analysis only — not trading signals or financial advice” · data visible only to its owner · Privacy · Terms · Support

06 — LANDING & ACCESS

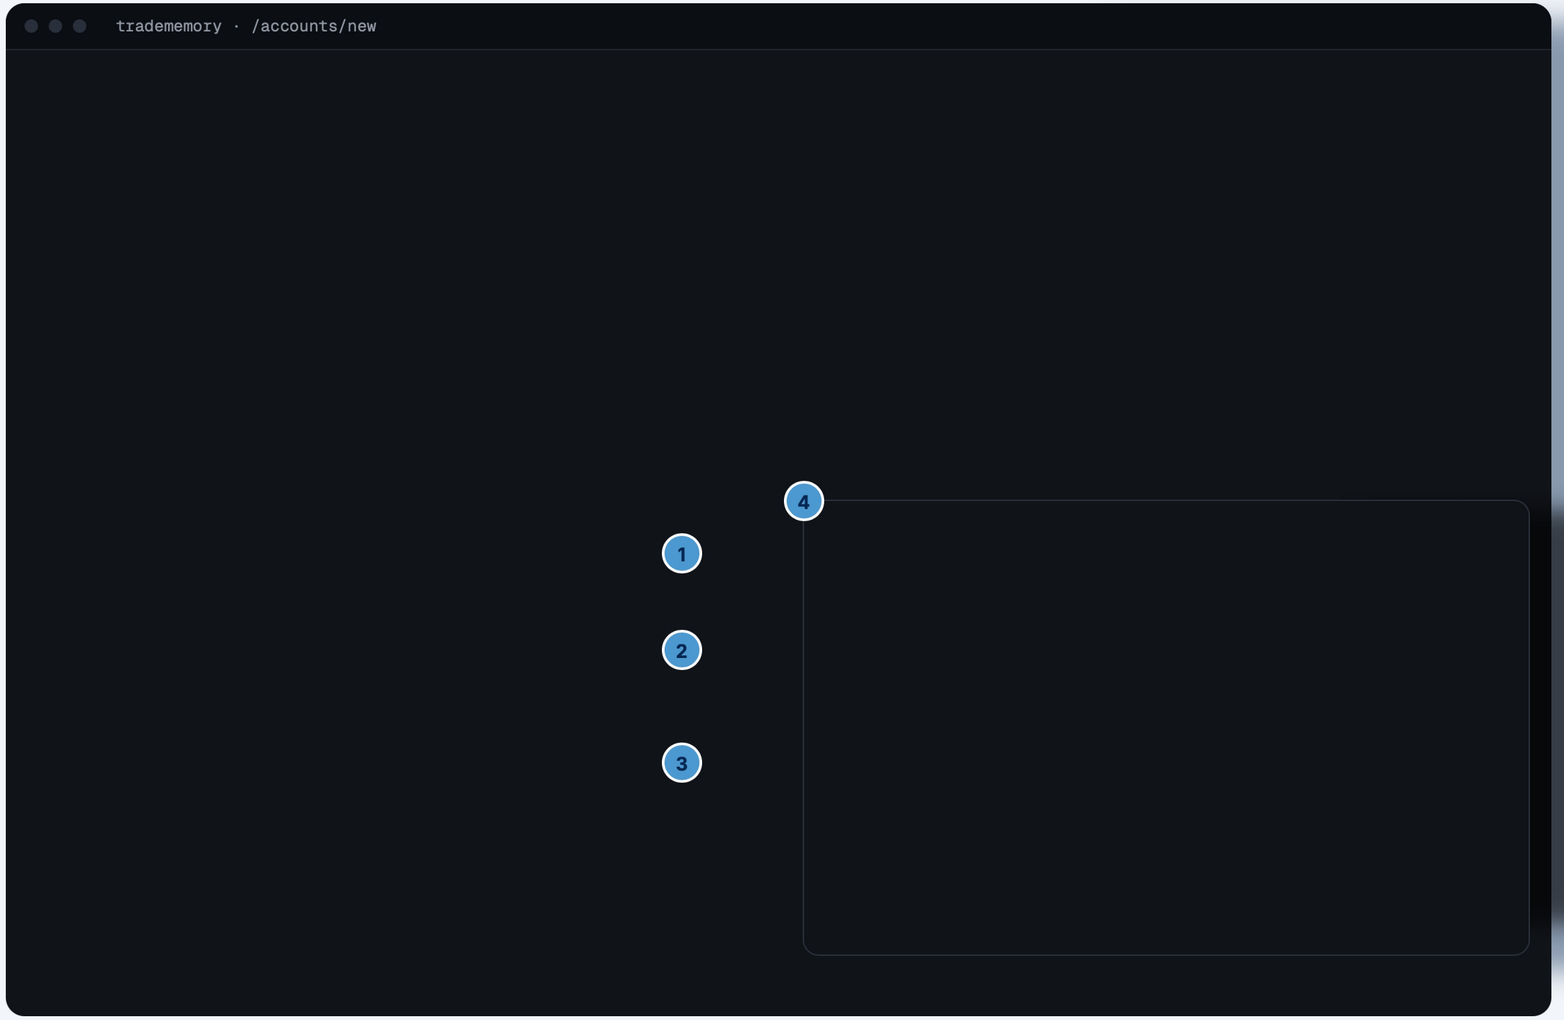

One screen, one honest promise

Log in · same card pattern for register and password reset

1. “Private beta” sets expectations before anyone signs up.
2. Four verbs carry the whole product loop: upload, verify, review, see patterns.
3. “Log in” is the filled button. New visitors are the audience here — give “Create account” the primary style.
4. The no-advice line sits on every page, not hidden in the terms.

NEXT ITERATION

Put the symbol in the header and show one product screen labelled “Example data” — the page describes the product but never shows it.

07 — ACCOUNT SETUP

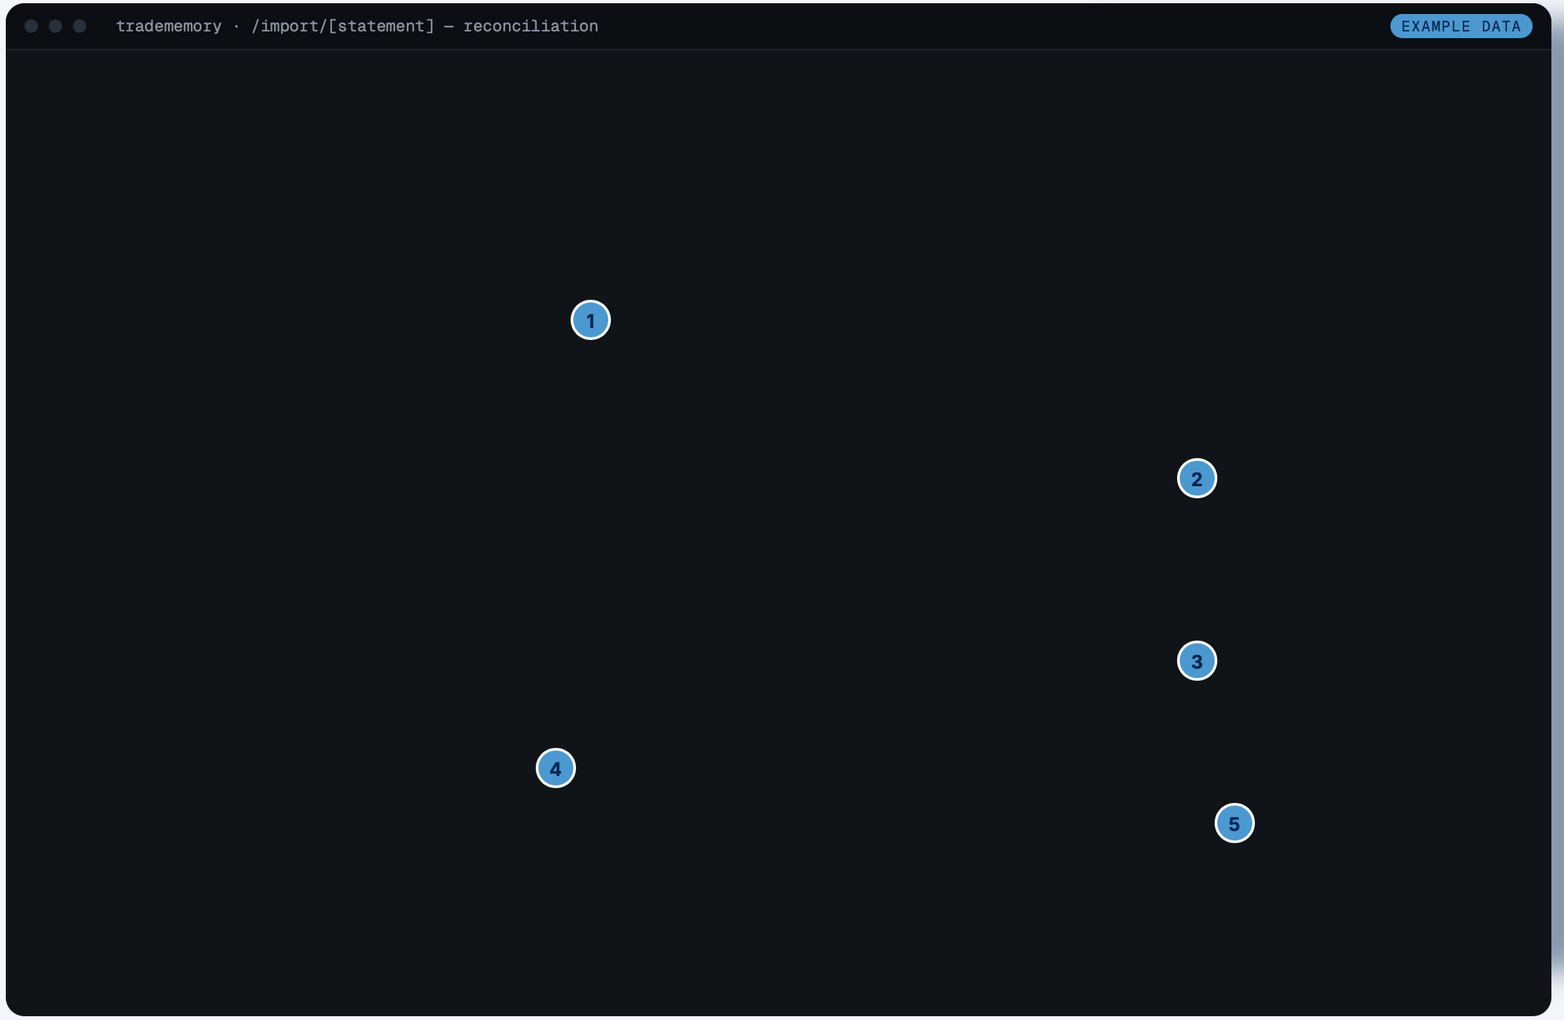

Set the rules once, trust every number

Before a single statement arrives, the trader states the conventions every figure depends on. Nothing is assumed from broker defaults.

1. Display timezone and statement timezone are separate fields — MT5 server time is not the trader's local day.
2. Pip size is explicit, with examples for FX and gold. Per-symbol rules come later in Settings.
3. One primary action, full width, at the end of a short form.
4. Settings explains why currency and account type are read-only instead of just disabling them.

NEXT ITERATION

Swap the free-text IANA fields for a searchable timezone picker with a live preview: “09:00 server time = 08:00 in Rome”.

08 — IMPORT & VERIFY · SIGNATURE SCREEN

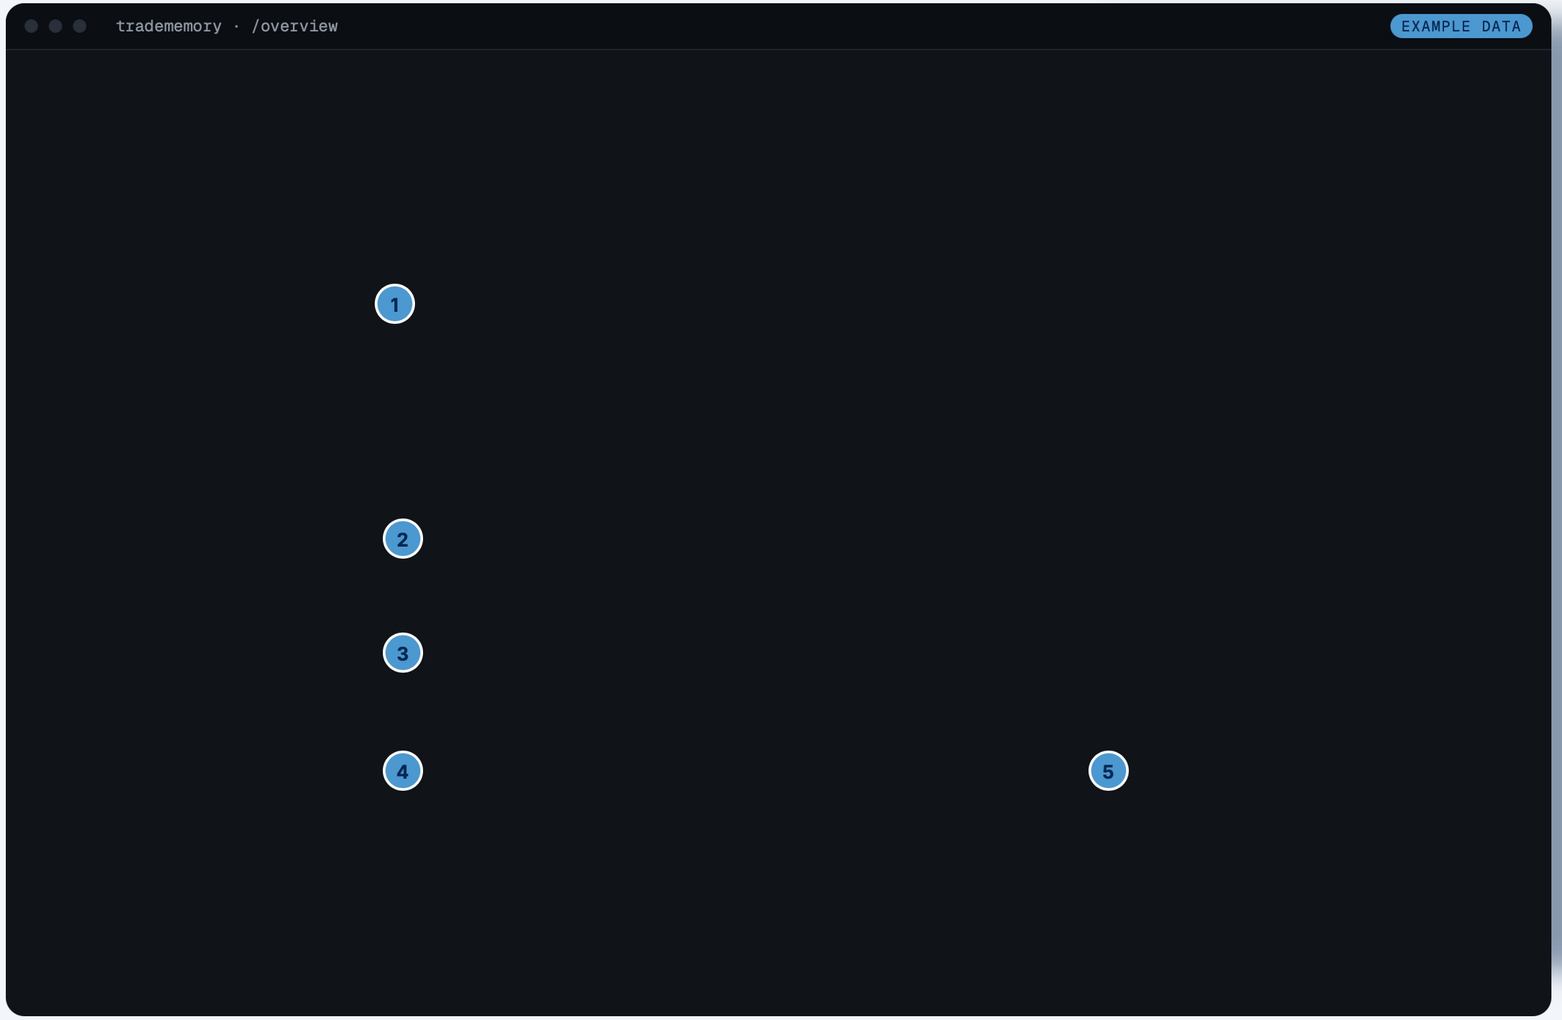

Trust before insight, made visible

Step 1 of 6 · nothing is added until the trader confirms

1. Status shows the raw value “ready_for_review” — humanise to “Ready for review”.
2. Three reconciliation checks, each with a plain-language proof line.
3. Every row accounted for: trades, deposits, unresolved.
4. Confirm is only enabled when every check passes.
5. The cost of cancelling is stated before the click.

NEXT ITERATION

Failures already name the exact row. Unresolved rows still print as raw JSON — show them as a readable table of the statement's own columns.

09 — OVERVIEW

Where am I, what's next

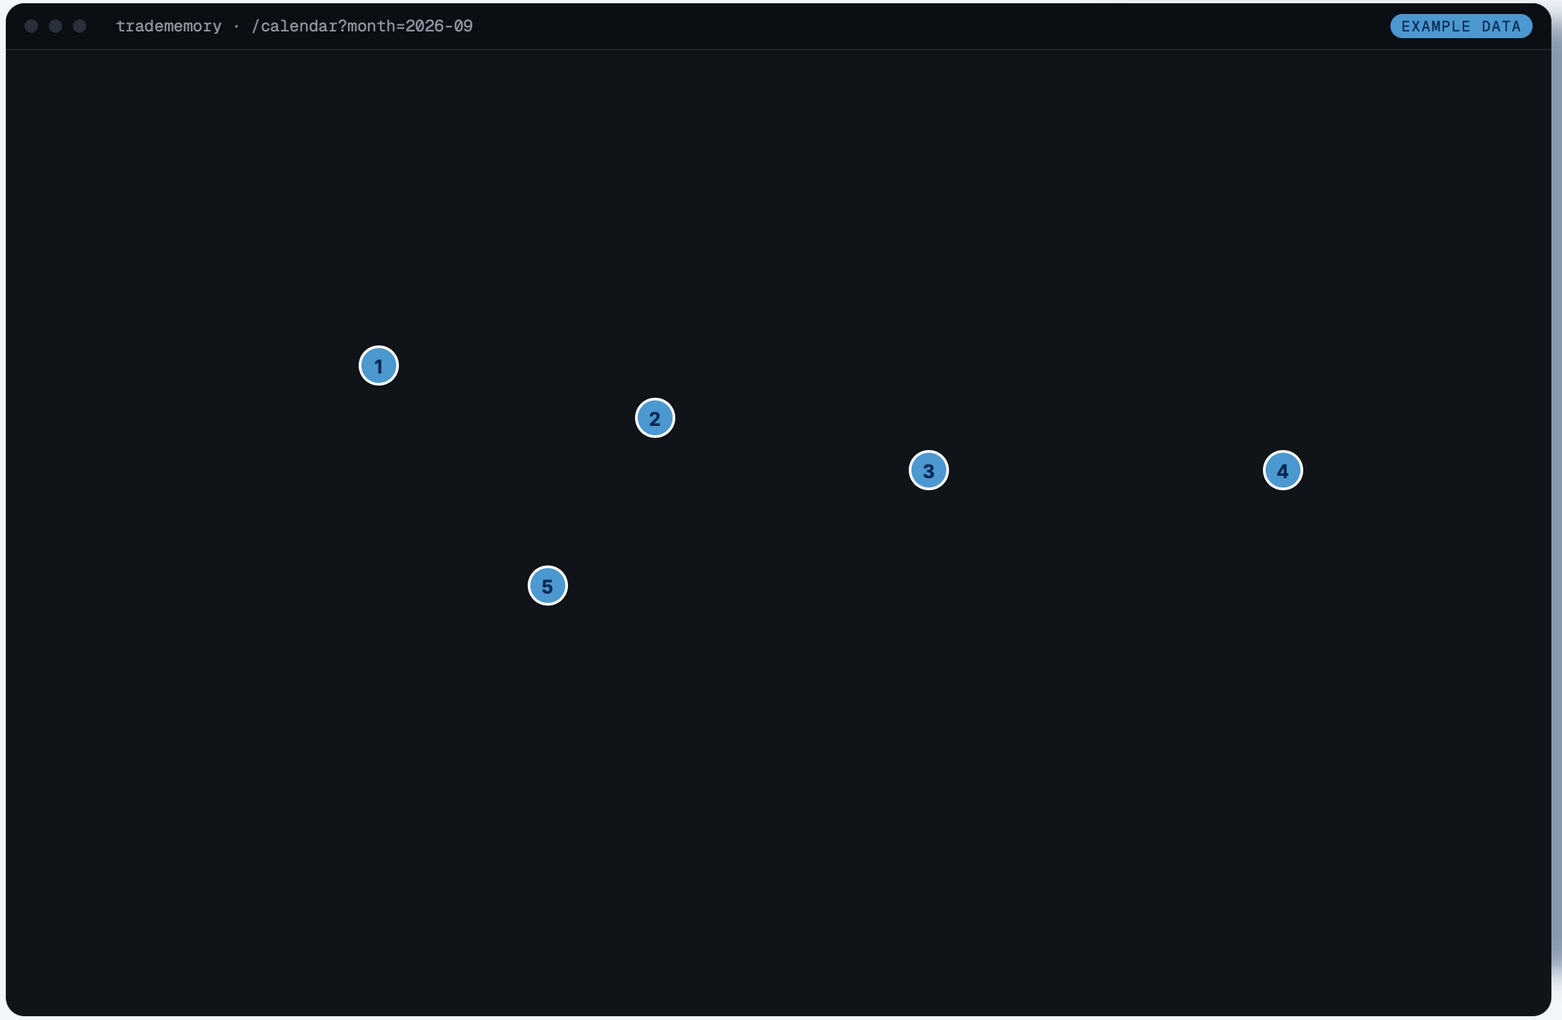

1. Six KPI tiles: net P&L, trade count, win rate, profit factor, reviewed, awaiting review.
2. Review progress with a counted call to action: “Continue reviewing (22 left)”.
3. Latest import and its status, one click from verification.
4. Three explainer cards — they repeat the sidebar.
5. Mini calendar, each day tinted by its realised result.

WHAT WORKS

The core habit — reviewing — is measured and nudged on the first screen, not buried in a menu.

NEXT ITERATION

Every card has equal weight. Make review progress the hero, replace the explainer cards with one “next best action”, and add thousands separators (+1,336.93).

10 — CALENDAR

A month of trading days

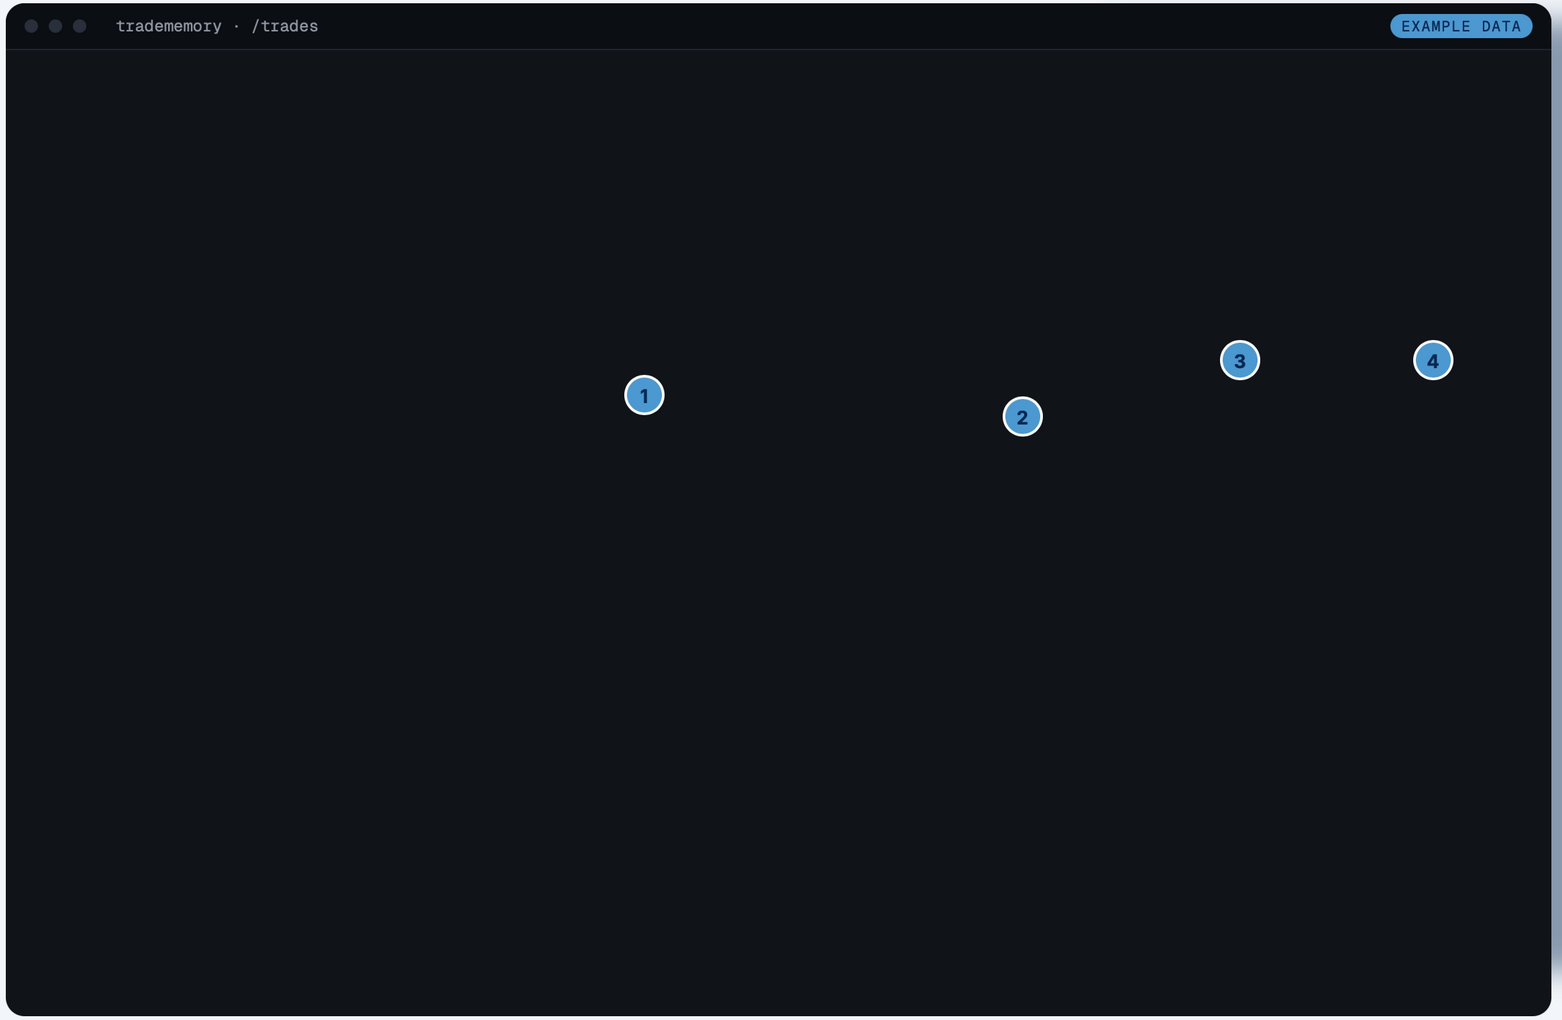

1. States its own rule up front: realised results only, assigned to the day a trade closed.
2. Month navigation with Prev, Next and Today.
3. Month KPIs count days, not just trades: profitable and losing days.
4. Review completion for the month sits beside the money.
5. Each cell: result, trade count and how many are reviewed.

WHAT WORKS

“1 trade · 0/1 reviewed” ties the journaling habit to the calendar a trader already thinks in.

NEXT ITERATION

The mini calendar on Overview tints each day; the full calendar does not. Use one treatment, and mark fully reviewed days.

11 — TRADES

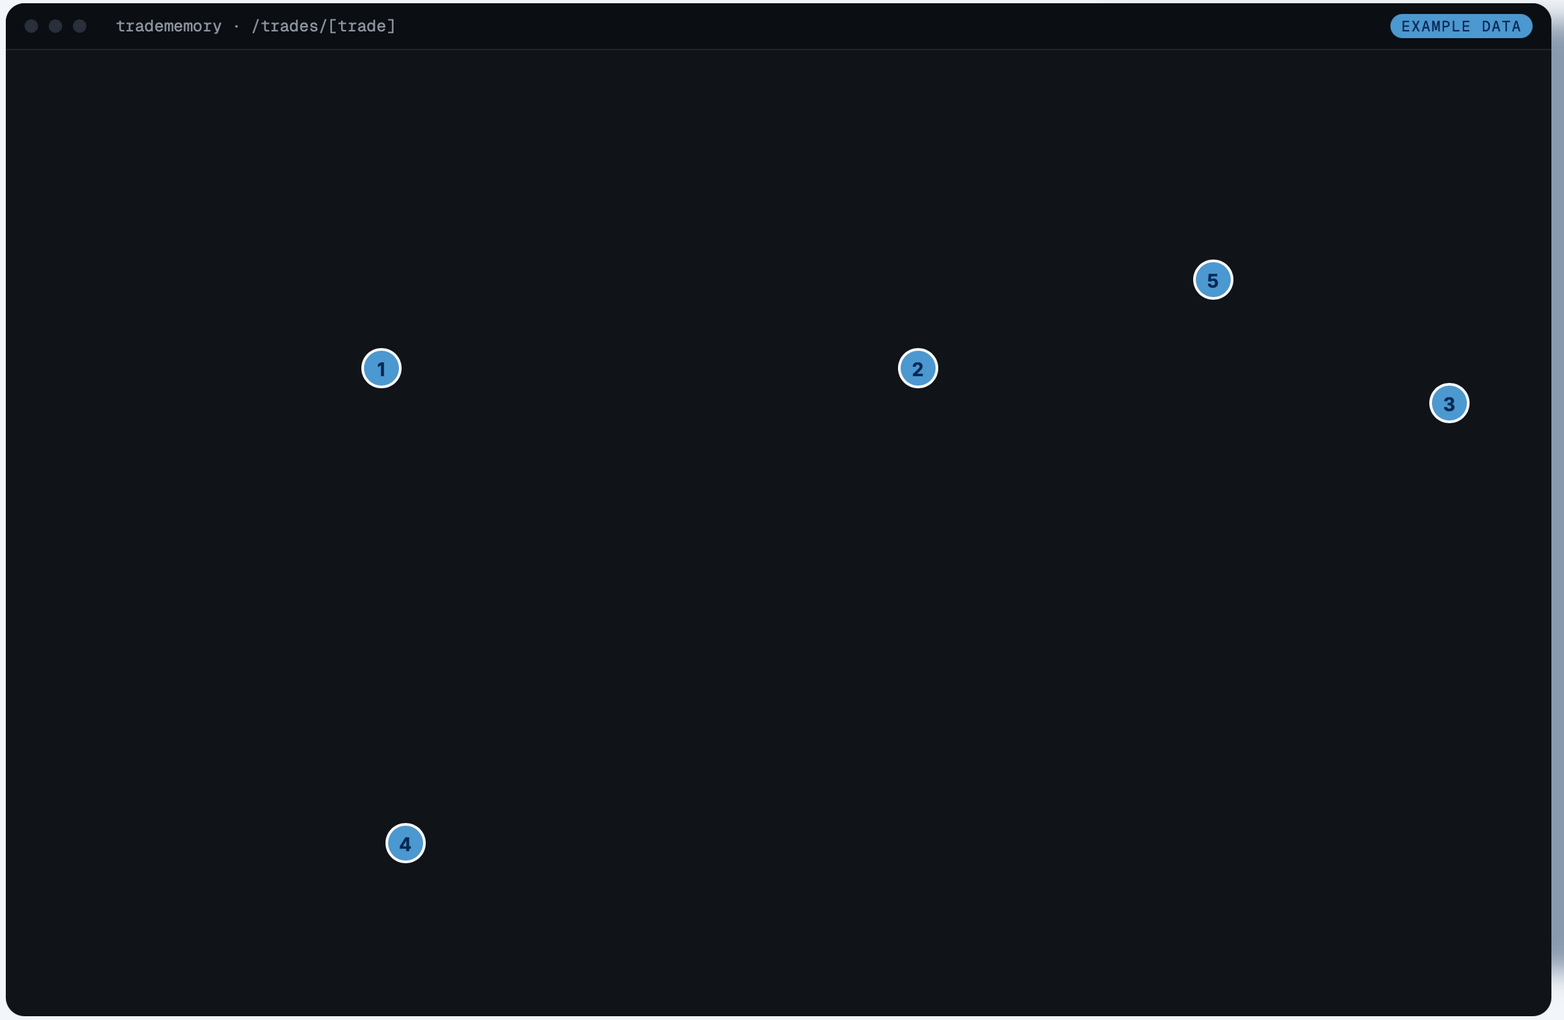

Every trade, rebuilt from deals

MT5 records deals, not trades. TradeMemory rebuilds each position from its in and out deals and lists the result.

1. Review status per row: Unreviewed, In progress, Complete.
2. Times use US format and the server's clock, not the account's display timezone used everywhere else.
3. Net P&L right-aligned and coloured, with its sign.
4. Linkage shows how each trade was matched to the statement's position record.

NEXT ITERATION

Format dates in the account's timezone, as Overview and Calendar do. Then add sorting and filters by symbol, side and review status — the table is 63 rows on one page.

12 — TRADE DETAIL

What happened beside what I meant

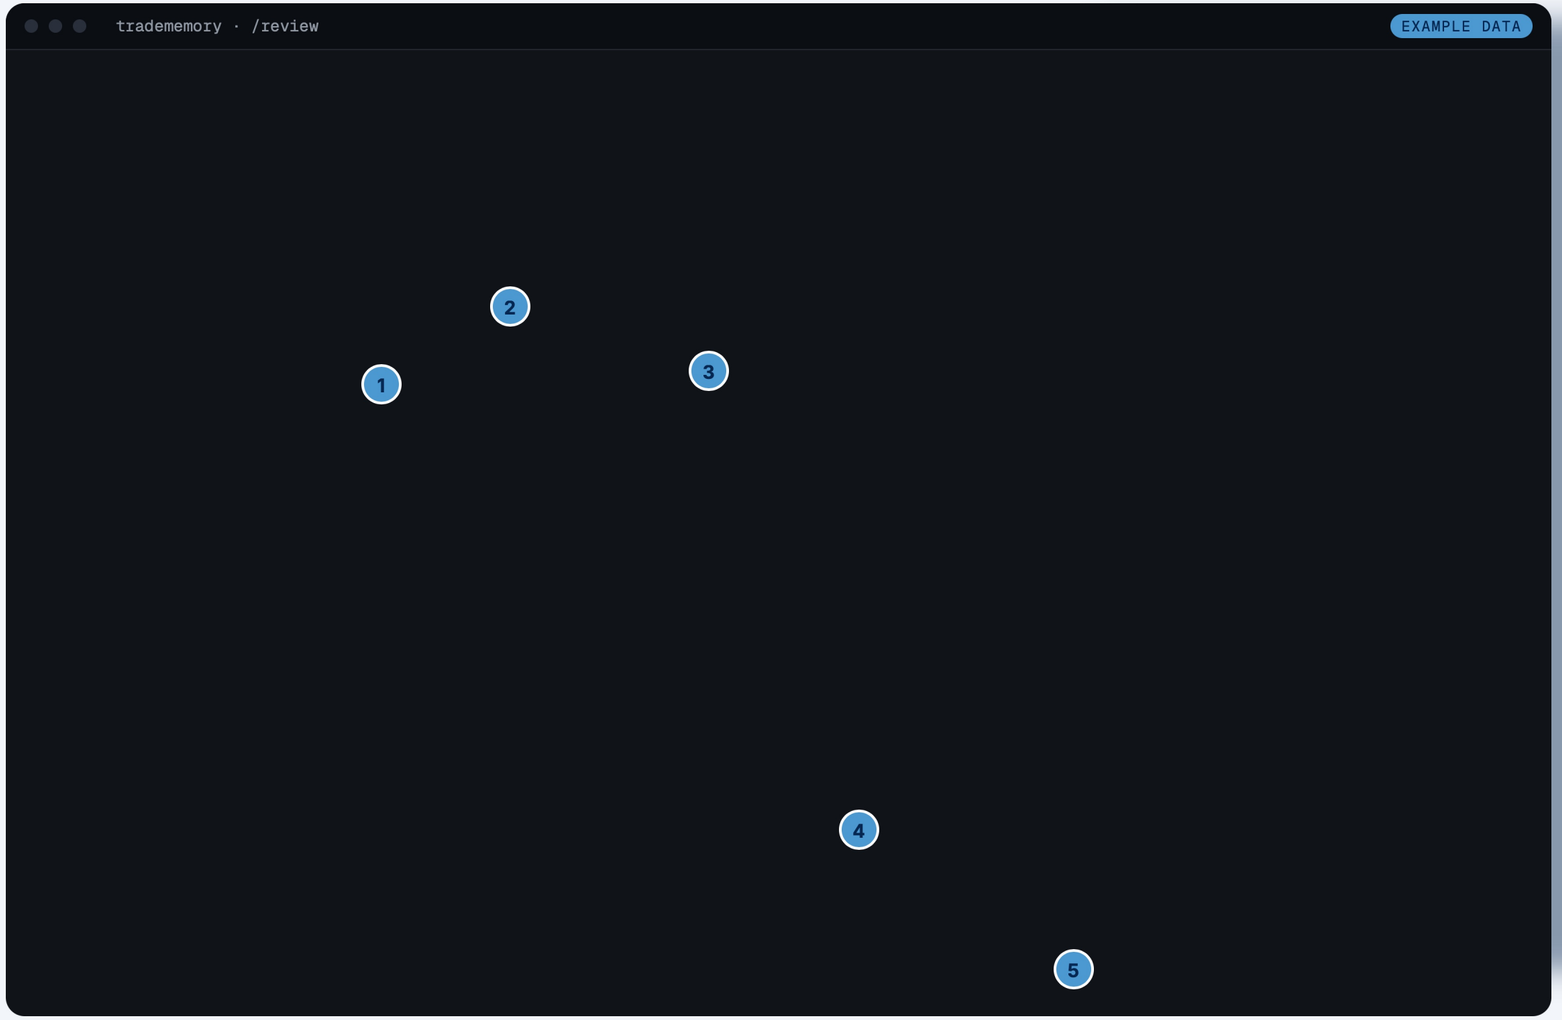

1. Left: statement-derived and read-only — the broker's truth.
2. Right: the trader's journal, labelled “manually entered”.
3. Review completeness as a percentage of fields filled.
4. Execution timeline: every deal, its role and how it was linked.
5. Previous and Next move through trades without going back to the list.

WHAT WORKS

The data model — raw, reconstructed, manual — is visible as layout. A trader can never mistake a note for a fact.

NEXT ITERATION

Selects show raw values like “break_even” — map them to labels. Show opened, closed and execution times in the account's timezone.

13 — REVIEW QUEUE · CORE HABIT

Journaling as an inbox

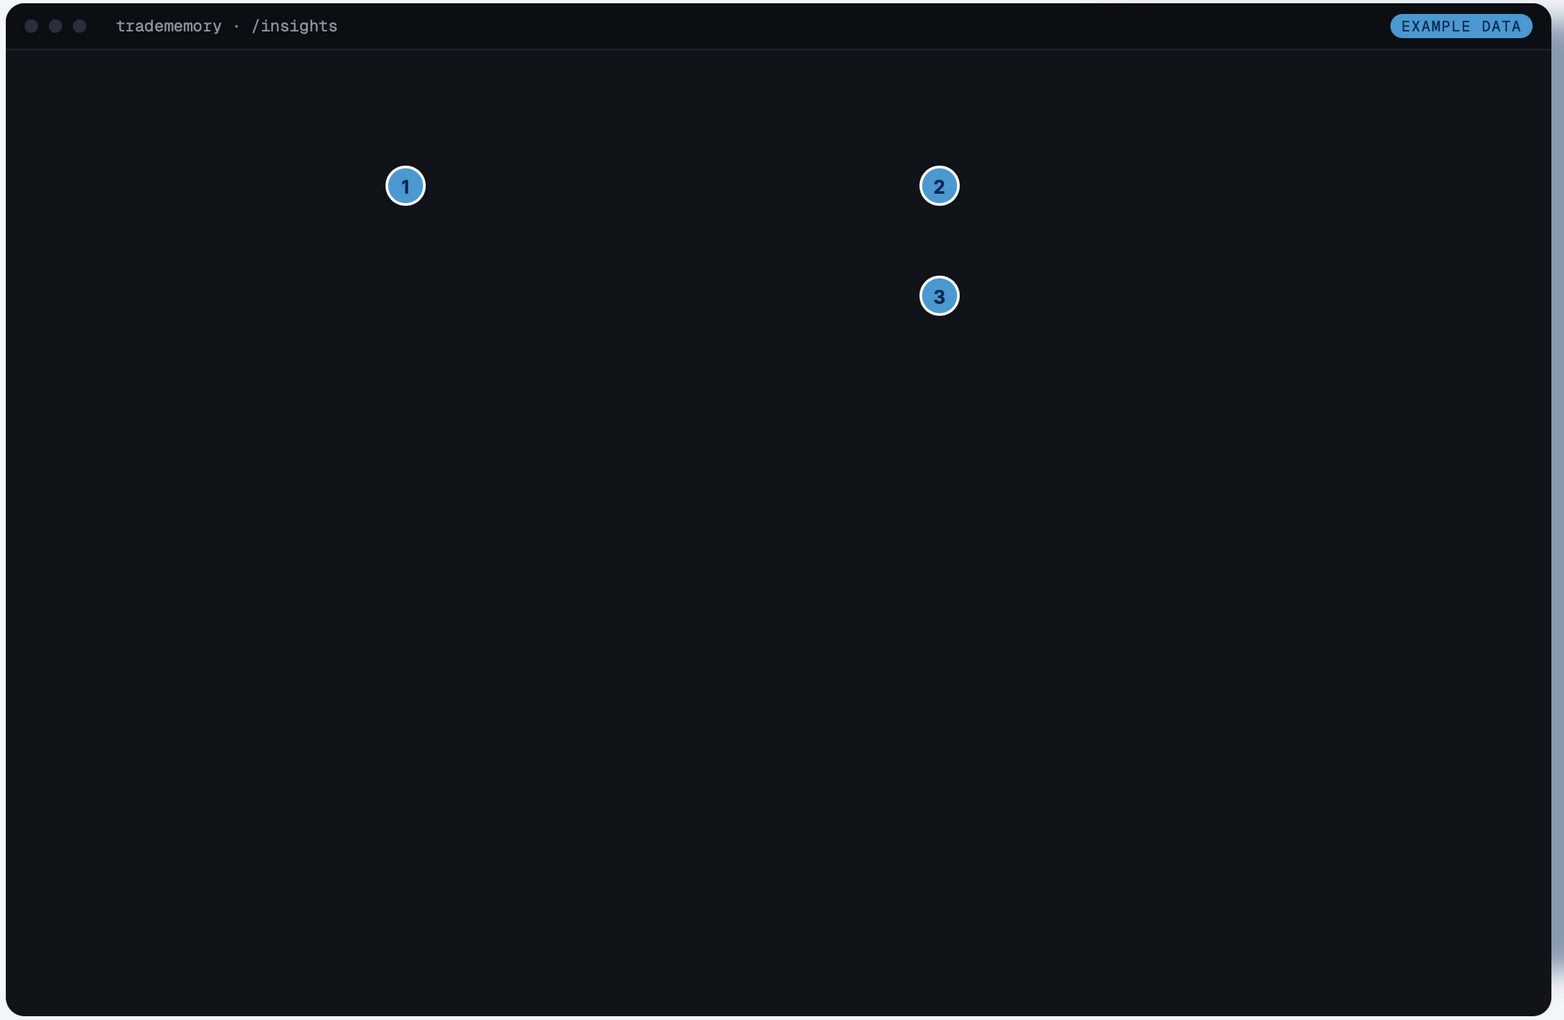

1. The queue is grouped by trading day, with each day's result and review count.
2. Progress across the account: 41 of 63 complete.
3. The trade's facts stay above the form while you write.
4. Every term has a "?" definition and a unit — pip, never a guess.
5. Two clear endings, always in reach: save a draft, or save and mark complete.

WHAT WORKS

Core fields first; Context, Quality and Behaviour fold away, so a quick review stays quick.

NEXT ITERATION

Make "Save and mark complete" jump to the next unreviewed trade, and add keyboard shortcuts — this is the screen traders spend the most time on.

14 — INSIGHTS

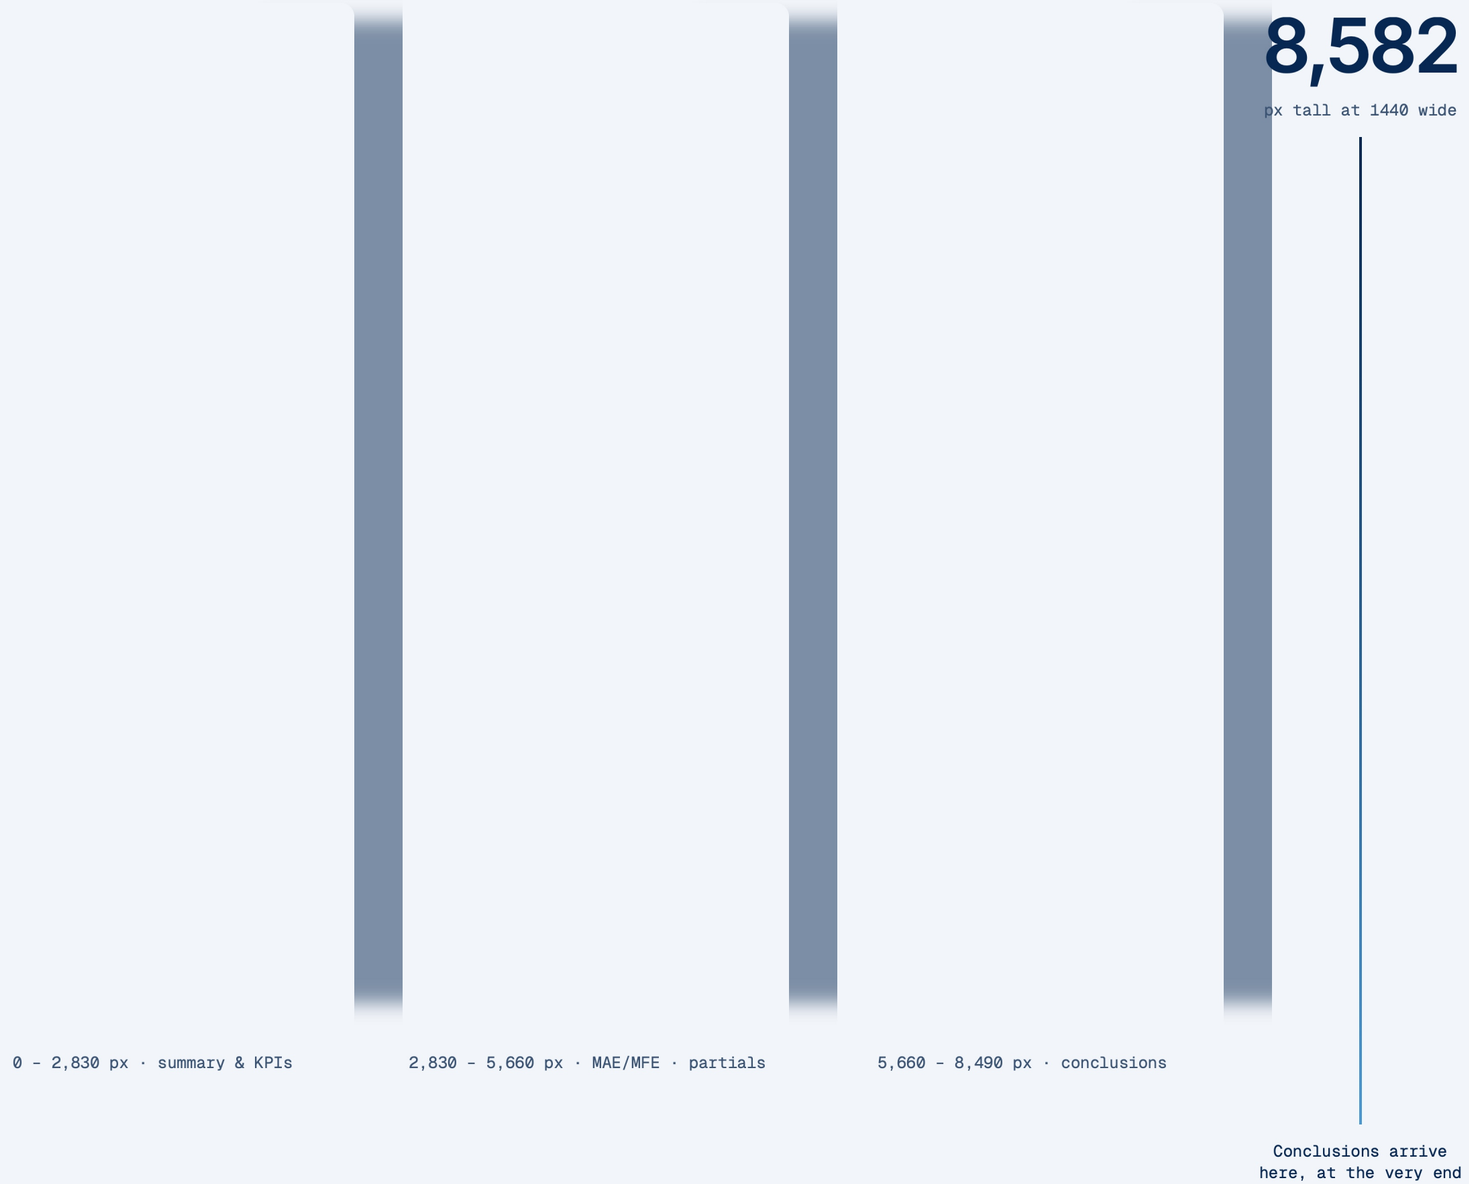

A mirror, not a crystal ball

4 · “Insufficient reviewed data (n=3, need 5)” — refuses to conclude

1. Cumulative result across every reconstructed trade.
2. Each chart opens by naming its population: “completed reviews with a setup (41 of 41)”.
3. Bars plus a table with n beside every value — sample size is never hidden.

NEXT ITERATION

The app already writes plain-language conclusions — on Statement analysis. Lead Insights with them too, and turn lines like “Yes: n=3, net 50.21 USD, WR 66.7%” into small tables.

15 — STATEMENT ANALYSIS

The deepest page, the longest scroll

One statement, examined end to end: summary KPIs, MAE/MFE evidence, partial-threshold analysis by symbol, planned SL/TP, trade management, and finally deterministic conclusions.

WHAT WORKS

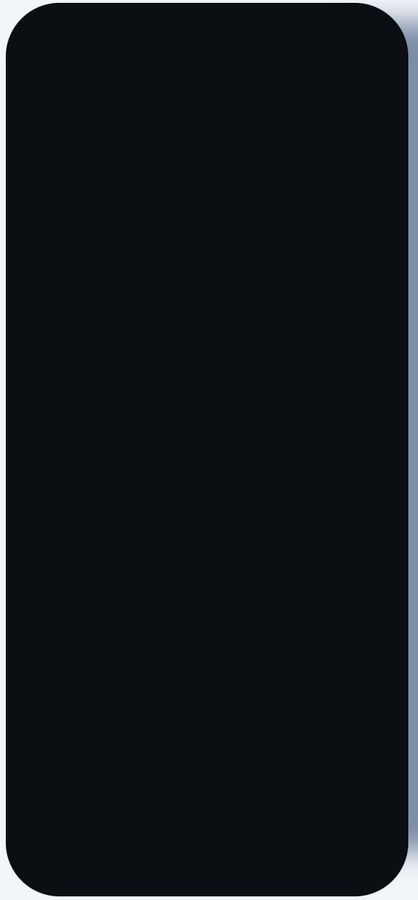

Rigour. Every section says which records are eligible and why, and the conclusions are deterministic — never generated.

THE PROBLEM

The payoff — “Statement conclusions” — is the last section. A trader has to scroll past 8,000 px of method to read what it means.

NEXT ITERATION

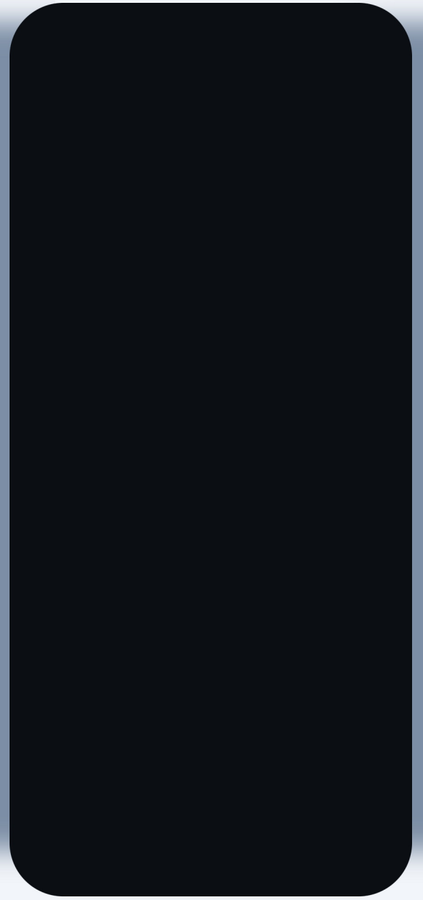

Invert the page: conclusions first, then tabs — Summary · Exits · Partials · Behaviour — with the method folded under each.

Overview · 390 px

Review queue · 390 px

Trade detail · 390 px

Light theme · opt-in under Settings → Appearance

16 — RESPONSIVE & THEMES

Review on the train, analyse at the desk

WHAT WORKS

One nav list drives both layouts: sidebar on desktop, four tabs plus More on a phone. Light theme contrast is checked by a unit test.

NEXT ITERATION

“+1336.93 USD” wraps onto two lines in a phone tile. Shrink KPI figures on small screens and keep the currency on one line.

17 — ROADMAP

UI / UX roadmap

Phase 1 is what ships today. Phases 2 and 3 come from this screen-by-screen audit — each item points back to a board.

PHASE 1 · SHIPPED

Private beta

- ● Six-step import gated by three reconciliation checks · 08
- ● Trades rebuilt from deals, with execution linkage · 11 · 12
- ● Review queue with a four-section journal · 13
- ● Overview, calendar and insights with n on every figure · 09 · 10 · 14
- ● Mobile bottom navigation; dark and AA-tested light themes · 16

PHASE 2 · NEXT

Polish & consistency

- ○ One date and time format, in the account's timezone · 11 · 12
- ○ Human labels for every stored value — no “break_even” · 08 · 12
- ○ Thousands separators; KPI figures that fit a phone · 09 · 16
- ○ Save and mark complete moves to the next trade · 13
- ○ Sorting and filters on the trades table · 11
- ○ Self-serve data export and deletion · privacy page

PHASE 3 · LATER

Clarity & brand

- ○ Conclusions first on Insights and Statement analysis · 14 · 15
- ○ Overview with one hero: review progress · 09
- ○ Symbol in the header, favicon, app icon · 02 · 06
- ○ UI tokens moved toward navy and sky · 03 · 04
- ○ Landing page that shows the product, labelled example data · 06

SUCCESS SIGNAL An activated tester has imported a statement and journaled at least 5 trades.
